

MyAmici and My Green Lab announce collaboration to support more sustainable lab purchasing

The integration helps life-science labs consider environmental impact alongside price and availability with other purchasing solutions to aid sustainability.

UNITED KINGDOM, September 1, 2026 /EINPresswire.com/ -- Integration underway will bring [My Green Lab](#)® ACT® Ecolabel data into [MyAmici](#)'s multi-supplier procurement platform as an ACT Ecolabel Channel Partner, helping life-science labs consider environmental impact alongside price and availability along with other purchasing solutions to aid sustainability.

LONDON and SAN DIEGO, 1 September 2026 — MyAmici, the intelligent LabOps platform for biotech and life-science organizations, has entered into a new collaboration and sponsorship agreement with My Green Lab, a global non-profit organization working to build a culture of sustainability in science.

At the center of the relationship is the integration of My Green Lab's ACT Ecolabel product certification data into the MyAmici purchasing experience. As an ACT Ecolabel Channel Partner, MyAmici customers will be able to see third-party-verified environmental information for participating laboratory products while searching and comparing items across supplier catalogues. The integration is also intended to enable users to filter for ACT-certified products and to report on sustainable purchasing activity. This will allow procurement teams and scientists to consider sustainability alongside price and availability without leaving their normal purchasing workflow.

The ACT Ecolabel provides a standardized, science-based assessment of the environmental impact of laboratory products, including consumables, chemicals, reagents, PPE, and equipment. The ACT Ecolabel product-level information can support more informed purchasing decisions and organizations' wider sustainable-procurement and Scope 3 carbon-reduction goals.

By bringing trusted ACT Ecolabel data into MyAmici, we aim to enhance our sustainable procurement controls, making it an easy part of lab operations rather than another manual process. "

*Caroline Briggs, CEO of
MyAmici*

The collaboration addresses a practical challenge for life-science organizations: sustainability information often sits outside the systems used to source and buy laboratory products. Bringing ACT data into MyAmici's consolidated marketplace is intended to make that information easier to find, compare, and use at the point of decision.

The ACT Ecolabel Certification Program was created to provide clear, third-party verified product sustainability information across numerous categories.

"When science-based environmental impact information is

provided at the point of product comparison and choice, customers and companies are able to support their sustainability commitments with routine procurement actions. My Green Lab is pleased to partner with MyAmici to help organizations reduce the environmental impact of their amazing work in the life sciences," said Scott Weitze, Vice President of Research and Technical Standards at My Green Lab.

Additionally [MyAmici's software platform](#) can aid sustainability challenges through its automated PO consolidation technology, process controls and visibility at the point of purchase of environmentally impacting reagents as well as inventory management integrated with procurement – stopping overordering of what is already in stock or on order.

"Labs want to make more sustainable choices, but the information has to be available at the point when purchasing decisions are being made," said Caroline Briggs, CEO of MyAmici. "By bringing trusted ACT Ecolabel data into MyAmici, we aim to enhance our sustainable procurement controls, making it an easy part of lab operations rather than another manual process. This collaboration is an important step towards giving our customers greater clarity, control and confidence."

MyAmici will also support My Green Lab's program of education and industry engagement as a sponsor.
