

# CloudOffix Expands U.S. Presence Through Strategic Partnership with Gate Consulting

*CloudOffix and Gate Consulting join forces to help American manufacturers and acquisitive organizations modernize front-office operations.*

COLUMBIA, MD, UNITED STATES,

September 1, 2026 /EINPresswire.com/ -- [CloudOffix](#), the AI-native business platform that unifies data, business applications, workflows and AI, has entered into a strategic partnership with [Gate Consulting](#), a U.S.-based management consulting firm specializing in digital manufacturing, AI and IT transformation, M&A technology integration and organizational change management.

“

Being able to establish a unified front office in weeks instead of quarters changes what is realistically achievable within an integration plan.”

*Erhan Cevikel, Managing Partner at Gate Consulting.*

Through the partnership, Gate Consulting will promote, sell and implement the CloudOffix platform across the United States, with a particular focus on mid-market and enterprise manufacturers as well as organizations navigating mergers, acquisitions, divestitures and post-acquisition integration.

The collaboration addresses a growing operational challenge for established enterprises.

CloudOffix enables organizations to modernize this operational layer without replacing or disrupting their core technology investments. Its unified platform connects business data, applications and workflows while providing AI assistants and autonomous agents that operate securely within real business processes.

“Our clients have spent years and millions perfecting the back office. The front office is where value quietly leaks out, and that is precisely the gap CloudOffix closes,” said Erhan Cevikel, Managing Partner at Gate Consulting.

Cevikel added: “Our clients run serious ERP investments—SAP, Oracle and PLM environments that took years to get right—and nobody wants to disturb them. But around those systems sits a front office held together by spreadsheets, disconnected point tools and email. CloudOffix lets us modernize that layer without touching the core. Because it is flexible, low-code and AI-native,

we can shape it around how a client actually works rather than forcing the client to work around the software. In our experience, that is the difference between a system that gets installed and a system that gets adopted.”

The partnership will also focus on organizations undergoing mergers, acquisitions, divestitures and post-acquisition integration. These transactions often leave businesses operating with duplicate systems, fragmented customer and employee data, inconsistent workflows and disconnected teams.

CloudOffix provides a unified operational foundation that can connect processes and data across newly combined organizations. Instead of waiting for lengthy core-system consolidation projects to be completed, companies can establish shared front-office processes and operational visibility considerably earlier in the integration journey.

“In a post-acquisition integration, you have two of everything: two CRMs, two service desks, two HR systems and a very short window to make them work as one,” Cevikel said. “Being able to establish a unified front office in weeks instead of quarters changes what is realistically achievable within an integration plan.”

By connecting existing systems rather than requiring their immediate replacement, CloudOffix can help organizations create common processes across sales, customer service, projects, HR and other operational functions. This approach enables leadership teams to improve visibility and coordination while longer-term ERP and technology consolidation decisions are still being evaluated.

Gate Consulting’s role will extend well beyond software resale. The firm will lead customer discovery, solution design, implementation and organizational change management, helping ensure that each deployment reflects the way the customer’s teams and operations actually work.

Gate Consulting integrates organizational change management practices into its AI and technology transformation programs. This approach addresses adoption, user resistance, process alignment and workflow fit alongside the technical implementation—factors that frequently determine whether a new platform creates sustainable business value.

The partnership also aligns closely with Gate Consulting’s U.S. Market Entry practice, which supports international technology companies as they establish, staff and scale their American operations. This capability positions Gate Consulting not only as a sales and implementation partner but also as a strategic contributor to CloudOffix’s continued growth in the United States.

“The United States is a strategically important growth market for CloudOffix, particularly among manufacturers and organizations managing complex transformation programs,” said Gökhan Erdoğan, CEO of CloudOffix. “Gate Consulting combines deep experience in enterprise technology, manufacturing, M&A integration and organizational change. That combination is

especially valuable because successful transformation requires more than implementing software. It requires aligning technology with real processes, people and business outcomes. Together, we can help U.S. organizations modernize their front-office operations while protecting the ERP and enterprise systems they have spent years building.”

CloudOffix can integrate with established enterprise technologies, including SAP, Oracle, Microsoft, Salesforce, PLM platforms and other core business systems. This allows organizations to preserve their existing technology investments while creating connected workflows and a unified view of operations across departments.

For manufacturers, this can mean connecting customer, sales, service, project and operational information around existing ERP and PLM environments. For acquisitive organizations, it provides a practical path toward establishing shared processes and visibility while broader system consolidation continues.

Through the partnership, CloudOffix and Gate Consulting aim to help American organizations move beyond fragmented front-office operations and isolated AI initiatives toward a connected, governed and adaptable operational model.

#### About Gate Consulting

Gate Consulting is a Florida-based management consulting firm focused on business transformation, digital manufacturing, AI and IT transformation and M&A technology integration.

The firm provides manufacturing technology and ERP and PLM support, M&A due diligence, cutover and post-acquisition integration services, project and program management, organizational change management and U.S. market entry support. Gate Consulting helps organizations align technology investments with operational priorities, adoption requirements and measurable business outcomes.
