Prolapse Devices And Equipment Global
Market Report 2026 – Market Size,
Forecast 2026-2035*

LONDON, GREATER LONDON, UNITED
KINGDOM, September 1, 2026

/EINPresswire.com/ -- The market for

[urinary incontinence and pelvic organ prolapse devices](#) and equipment has seen notable expansion in recent years, driven by increasing awareness and advancements in treatment options. As more people seek effective management solutions for these conditions, the market is positioned for ongoing growth. Here is a detailed look at the market size, key drivers, regional insights, and emerging trends shaping this industry.

Market Size and Growth Outlook for Urinary Incontinence and Pelvic Organ Prolapse Devices and Equipment

The urinary incontinence and pelvic organ prolapse devices and equipment market has been growing steadily. It is projected to increase from \$4.06 billion in 2025 to \$4.28 billion in 2026, reflecting a compound annual growth rate (CAGR) of 5.4%. This past growth has been largely fueled by higher incidence rates of urinary incontinence disorders, greater awareness of pelvic health issues, more treatment options becoming available, wider acceptance of medical devices for managing urinary incontinence, and the expansion of gynecological healthcare services.

https://www.thebusinessresearchcompany.com/sample.aspx?id=2430&type=smp&utm_source=EINPresswire&utm_medium=Paid&utm_campaign=Sep_PR

Looking ahead, the market is expected to continue its upward trajectory, reaching \$5.39 billion by 2030 with a CAGR of 6.0%. This forecasted growth is driven by the expanding global aging population, an increasing preference for non-invasive treatment methods, broader adoption of home healthcare, rising investments in women's health technologies, and growing demand for

advanced pelvic floor rehabilitation devices. Key trends anticipated during this period include more widespread use of minimally invasive devices, greater interest in non-surgical management options, increased application of electrical stimulation therapies, enhanced availability of patient-centric devices for home use, and a stronger emphasis on comfort and biocompatibility.

Understanding the Role of Devices in Treating Urinary Incontinence and Pelvic Organ Prolapse Urinary incontinence (UI), defined as involuntary urine leakage due to an overactive bladder, and pelvic organ prolapse (POP), which results from weakness in the vaginal supporting structures, are the primary conditions addressed by these devices and equipment. The products in this market are designed to aid in managing symptoms, restoring function, and improving the quality of life for affected individuals.

Key Factors Propelling Market Expansion for Urinary Incontinence and Pelvic Organ Prolapse Devices

One of the main forces driving growth in this market is the increasing size of the geriatric population. Typically comprising individuals aged 65 and above, this demographic has been growing due to longer life expectancies supported by healthcare advancements and better living conditions. Because urinary incontinence and pelvic organ prolapse are common ailments among older adults, demand for related medical devices naturally rises. For example, in October 2023, HelpAge International, an NGO dedicated to older adults' rights, projected that by 2050, 80% of the world's elderly will be living in low- and middle-income countries. This demographic shift is a significant factor boosting market demand, particularly in regions with aging populations.

Additional Drivers Supporting Market Growth

Beyond demographic factors, increasing awareness about pelvic health and the expanding availability of treatment options also contribute to market momentum. Patients and healthcare providers are becoming more informed about non-surgical and minimally invasive therapies, driving adoption of innovative devices. Simultaneously, the expansion of gynecological care and rehabilitation services worldwide is creating new avenues for device usage, further supporting market growth.

Regional Highlights in the Urinary Incontinence and Pelvic Organ Prolapse Devices Market

In 2025, North America held the largest share of the urinary incontinence and pelvic organ prolapse devices and equipment market, followed by Western Europe as the second-largest region. The market analysis also encompasses Asia-Pacific, South East Asia, Eastern Europe,

South America, the Middle East, and Africa, providing a comprehensive global perspective on market distribution and growth prospects.
