

AuditFile Launches Agentic AI Orchestrator Suite

The new platform staffs engagements with teams of autonomous AI agents that firms can manage from the web, iPhone, iPad, Apple Watch, command line, API, and MCP

SAN FRANCISCO, CA, UNITED STATES, September 1, 2026 /EINPresswire.com/ -- AuditFile, Inc., provider of a cloud-based audit automation platform for CPAs and internal audit teams, has launched the AuditFile Agentic AI Orchestrator Suite.

The Orchestrator Suite builds on AuditFile's AI Audit Agents, a winner of the 2025 CPA Practice Advisor Technology Innovation Award, by coordinating teams of specialized, long-running autonomous agents across an engagement. The agents handle tasks such as generating and reviewing PBC request lists, preparing risk assessments, classifying trial balances, generating financial statements, and completing disclosure checklists. The agents work continuously.

With the AuditFile Agentic AI Orchestrator Suite, AI agents and human staff are treated interchangeably within an engagement: both are assigned, tracked, and reviewed the same way. Partners and managers approve, reject, or redirect work through a sign-off queue, and every action, whether taken by an agent or a person, is captured in an immutable, evidence-linked audit trail. Agent work product is grounded in the trusted Advantage Audit AI methodology.

The suite is also the first audit platform professionals can command from smartphones and smartwatches. A partner can launch substantive procedures from the office, receive an Apple Watch notification when agents finish in the evening, and approve the work from an iPhone. Developers can drive engagements from a command-line interface or the API, and through the Model Context Protocol (MCP), a firm's other approved AI tools can securely task and query AuditFile. The platform additionally supports Bring Your Own Token (BYOT), which allows firms to run agents on their own AI model subscriptions and provider agreements, keeping model choice, cost, and data terms under firm control.

"With agentic AI, we solved 'doing the work.' Now we're augmenting human staff with AI agents," said Steven Bong, CEO of AuditFile. "The Orchestrator Suite is the firm that staffs itself: agents do the work, humans apply judgment. With AuditFile's iOS apps for iPad, iPhone, and Apple Watch, you can manage your human staff and AI agents from the beach. Audit software that can't orchestrate AI agents from a phone is now obsolete."

The Agentic AI Orchestrator Suite is available now for customers on Pro Plus! and Enterprise

plans.

About AuditFile

Founded by CPAs in 2011, AuditFile, Inc. delivered the profession's first completely cloud-based audit automation solution and holds U.S. Patent No. 10,891,294 covering the application of artificial intelligence to financial statement audits. AuditFile is the only complete, cloud-based, all-in-one engagement automation platform for public accounting professionals, and was named the #1 Audit Tool in the CPA Practice Advisor Readers' Choice Awards for four consecutive years. Offered in three subscription tiers that scale from sole practitioners to government audit organizations, AuditFile includes data storage, web-based training, and technical support in every subscription.
