

Made in India: Syscore's Technology Powering Global Sustainability Programs

Syscore joins D2O Impact Summit 2026 as a Platinum Partner, highlighting more than 20 years of work supporting global sustainability programs

JAIPUR, DC, UNITED STATES, September 2, 2026
/EINPresswire.com/ -- [Syscore](#), the technology company working to empower organizations to thrive in a sustainable and interconnected world, will serve as a Platinum Partner of the D2O Impact Summit 2026, taking place this week in Jaipur. As India takes on a larger role in the global sustainability economy, Indian companies like Syscore are not only implementing sustainability solutions at home, they're building the systems that help organizations around the world put sustainability into practice.

Syscore logo

Syscore, with its innovation and development team based entirely in India, has more than two decades of experience working at the intersection of sustainability, health, standards, and social impact. Its team has been behind technology supporting some of the world's most recognized sustainability and impact programs, including global organizations like IWBI, GreenSeal, Delos, and ASCE.

“

Indian teams are helping build the systems and infrastructure that allow sustainability programs to operate and scale around the world.”

Shekhar Chikara, CEO, Syscore

“India's role in the global sustainability movement is much bigger than what is happening within our own borders,” said Shekhar Chikara, CEO, Syscore. “Indian teams are helping build the systems and infrastructure that allow sustainability programs to operate and scale around the world. Our team has worked behind some of the world's most recognized sustainability and health programs and

it's the understanding of this space that sets Syscore apart.”

For Syscore, that work reflects a larger Made-in-India story, with technology and sustainability expertise developed in India and applied to some of the world's most complex sustainability challenges. India's sustainability sector is growing rapidly through renewable energy

investments, stricter carbon regulations and large-scale government green commitments, creating a new generation of Indian companies whose sustainability expertise is increasingly being applied beyond the country's borders.

That story will take center stage at the D2O Impact Summit 2026, which brings together leaders across sustainability, technology, and innovation at a time when India's role in developing and scaling sustainability solutions continues to grow. Attendees can meet the Syscore team to learn more about the technology and infrastructure behind global sustainability programs, including [Standardly](#), a new platform Syscore is developing for organizations managing standards and certification programs around the world.

About Syscore

Syscore builds purpose-built technology for organizations tackling complex, mission-driven work. With more than 20 years of experience, the company has helped create and support digital platforms behind globally recognized sustainability, health, and impact programs. Syscore brings together strategy, software architecture, data, workflows, and emerging technologies such as AI to turn operational complexity into scalable digital systems. <https://www.sys-core.com/about>
