

Top Artificial Turf Manufacturer Strengthens Global Market Presence Through Innovation and Quality

JIAXING, ZHEJIANG, CHINA, September 2, 2026 /EINPresswire.com/ --

Haining Lingwo New Materials Co., Ltd. is strengthening its position in the international [artificial turf](#) industry as demand continues to rise for durable, realistic and low-maintenance landscaping and sports surface solutions. Founded in 2013, the company has developed a broad product portfolio covering artificial landscape grass, artificial sports grass, artificial green walls, artificial hedges, artificial fences and other simulated greenery products. With manufacturing, customization and project support capabilities, the company is increasingly serving customers across residential, commercial, hospitality, sports and landscaping applications. According to its published company information, its products have been exported to more than 100 countries and it has participated in more than 1,000 partner projects.

The artificial turf market has changed considerably as property developers, sports facilities, contractors, landscape designers and homeowners seek alternatives to natural grass that can provide consistent visual performance while reducing routine maintenance requirements. Artificial turf is now used in a wide range of environments, including football fields, training grounds, residential gardens, balconies, rooftops, hotels, resorts, parks, commercial properties and recreational facilities. This broadening application range has created greater expectations for manufacturers, particularly in areas such as product realism, durability, safety, customization and supply reliability.

For manufacturers operating in this competitive market, production capability alone is no longer enough. Buyers increasingly expect suppliers to understand the specific requirements of different applications and provide products that can be adapted to individual projects. Haining Lingwo New Materials Co., Ltd. has developed its business around this changing market environment, offering artificial grass and artificial plant products together with OEM and ODM services. The company's published information indicates that it provides one-stop support covering design, manufacturing, sales and installation assistance, allowing customers to obtain products and project support from a single supplier.

One of the company's important application areas is sports turf. Football and soccer facilities require surfaces capable of handling frequent movement, repeated training sessions and intensive use. The performance of the turf can influence the playing experience, field

appearance and long-term maintenance requirements. Haining Lingwo New Materials Co., Ltd. offers [Football Field](#) solutions designed for sports applications, including football grounds, soccer fields, training facilities, community sports fields and other athletic venues.

The company's Football Field products are positioned around durability, safety and performance. Project customers can also request customized specifications according to their field requirements. Depending on the project, factors such as pile height, density, backing construction and other installation specifications can be considered during the product selection process. This project-oriented approach allows artificial turf to be adapted to different field layouts and usage conditions rather than relying on a single standardized specification.

The growing use of artificial football turf is closely connected with the need for sports facilities to maintain usable surfaces throughout different seasons and under demanding schedules. Natural grass can require regular watering, mowing, fertilization and recovery periods after intensive use. Artificial turf provides a different maintenance model and can offer a consistent appearance across many weather conditions. For schools, clubs, training centers and community facilities where playing areas may be used frequently, synthetic sports surfaces can provide a practical solution.

Beyond sports applications, landscaping represents another major area of growth for artificial turf manufacturers. Artificial landscape grass can be used in gardens, courtyards, terraces, balconies, rooftops, hotels, resorts, parks and public spaces. These applications allow property owners and designers to introduce a green visual environment without depending entirely on natural grass and its associated maintenance requirements.

Haining Lingwo New Materials Co., Ltd. has built a diverse portfolio to address these applications. Its product categories include artificial landscape grass, commercial turf, soccer turf, golf turf, padel turf and other sports turf products. The company also provides customized landscaping solutions based on project size, layout and installation requirements. Such flexibility is particularly relevant to contractors and distributors that may need different specifications for different markets or projects.

Artificial Green Wall products have also become an important part of the company's offering. As architects and interior designers look for new ways to incorporate greenery into commercial and residential environments, artificial green walls have become increasingly popular for decorative and visual applications. Hotels, restaurants, offices, shopping centers, retail stores and residential properties can use artificial plant walls to create feature areas, reception backgrounds, decorative walls and outdoor landscaping features.

Haining Lingwo New Materials Co., Ltd.'s Artificial Green Wall solutions are designed for both indoor and outdoor applications. The company states that its artificial plant wall products can be customized according to color, size, density and plant type, while additional personalization can include logos, graphic designs and branded elements. This makes the products suitable not only

for standard landscaping projects but also for businesses looking to create distinctive visual environments.

The demand for artificial green walls is being driven partly by the challenges associated with maintaining living plants in certain locations. Indoor spaces may not receive sufficient natural light, while rooftops and exterior walls can present difficulties involving irrigation and ongoing horticultural care. Artificial greenery offers a way to introduce a natural-looking visual element while simplifying routine maintenance. According to the company's published information, its artificial plant wall products can be cleaned by rinsing with water, while UV protection is incorporated into relevant products for outdoor use.

Product appearance is another important consideration. Modern buyers expect artificial greenery to look increasingly similar to natural plants. Manufacturers therefore need to pay attention not only to color but also to leaf shape, density, layering, texture and overall arrangement. Haining Lingwo New Materials Co., Ltd. describes its manufacturing approach as combining simulation technology with modern production processes. Its artificial plant factory information also indicates that raw materials can be combined with pigments, UV stabilizers and flame retardants before production, followed by foliage and backing production and manual assembly processes.

Quality and material performance are also increasingly important in international procurement. Customers purchasing artificial turf or artificial green walls for commercial projects often need products that meet specific safety and environmental requirements. Haining Lingwo New Materials Co., Ltd. publishes testing and certification information covering areas including REACH, RoHS, PFAS, CE, UV resistance and flame retardancy for relevant product categories. The company also states that selected products are manufactured without lead and certain harmful chemicals.

Durability is another area receiving attention from artificial turf buyers. Sports facilities and commercial landscaping projects can expose synthetic grass to repeated foot traffic and outdoor conditions. The company states that its artificial grass can withstand 50,000 cycles of wear and tear, while its FAQ indicates an expected artificial grass service life of approximately eight to ten years depending on usage conditions. Actual product life can vary according to application, installation, maintenance and traffic intensity, making appropriate product selection an important part of project planning.

Manufacturing capacity is also an important factor for international buyers. Large contractors, wholesalers and distributors need suppliers capable of maintaining stable production while meeting agreed specifications and delivery schedules. Haining Lingwo New Materials Co., Ltd. reports substantial production and warehousing resources. Its company information lists artificial grass capacity of approximately 5 million square meters per year and artificial green wall capacity of approximately 1.2 million square meters per year. The company also reports approximately 27,000 square meters of warehouse space and a dedicated sample room for

customers.

The company's OEM and ODM capabilities provide another competitive advantage for customers seeking differentiated products. Artificial turf distributors may require specific colors, blade designs, dimensions or packaging, while artificial plant wall customers may have their own visual concepts or branding requirements. According to the company's published information, customization can cover product colors, sizes, shapes, densities, logos and patterns, depending on the product category. This enables customers to develop products around their own market positioning instead of relying exclusively on off-the-shelf designs.

For international customers, supply chain support is equally important. Artificial turf and artificial plant products can occupy considerable shipping volume, meaning packaging, warehousing and transportation coordination can have a direct impact on project efficiency. Haining Lingwo New Materials Co., Ltd. describes its business model as providing one-stop service and global freight forwarding support, while its published customer information highlights cooperation with wholesalers, brand distributors, chain stores, e-commerce businesses and large project contractors.

The company's international development reflects the broader globalization of the artificial landscaping industry. With products reportedly exported to more than 100 countries, Haining Lingwo New Materials Co., Ltd. has experience working with customers with different product preferences, project requirements and purchasing models. Its stated cooperation with internationally recognized companies such as Hilton and Carrefour also illustrates the company's exposure to large-scale commercial procurement environments.

From an industry perspective, the combination of sports turf, landscape grass and artificial greenery allows Haining Lingwo New Materials Co., Ltd. to address multiple segments of the growing synthetic landscaping market. Football Field solutions serve the sports sector, while Artificial Green Wall products address commercial, hospitality, residential and decorative applications. This diversified portfolio allows the company to work with customers whose requirements range from individual product procurement to complete project-based landscaping solutions.

The company's development also demonstrates how the artificial turf sector is moving beyond simple product manufacturing. Modern buyers increasingly evaluate suppliers based on their ability to provide product development, customization, quality assurance, technical consultation, logistics coordination and after-sales support. Manufacturers that can integrate these capabilities into a single service system may be better positioned to meet the increasingly sophisticated needs of international customers.

As demand for artificial turf and artificial greenery continues to expand, product quality, realistic appearance, durability and customization are expected to remain important factors influencing purchasing decisions. At the same time, environmental considerations, material safety and

compliance testing are likely to receive greater attention from professional buyers. Companies with established manufacturing infrastructure and international supply experience will have opportunities to strengthen their positions by continuing to improve product technology and customer service.

Haining Lingwo New Materials Co., Ltd. Company Profile

Haining Lingwo New Materials Co., Ltd. is a China-based artificial grass and artificial plant manufacturer founded in 2013. The company specializes in artificial landscape grass, artificial sports grass, artificial football turf, artificial green walls, artificial hedges, artificial fences and related artificial greenery solutions. It provides products for residential, commercial, hospitality, sports and landscaping applications and supports OEM and ODM customization services. The company operates its own manufacturing facilities and warehouse resources and provides one-stop services covering design, manufacturing, sales and installation support.

According to the company's published information, its products are exported to more than 100 countries and have been used in more than 1,000 partner projects. Its reported annual production capacity includes approximately 5 million square meters of artificial grass and 1.2 million square meters of artificial green walls. The company also emphasizes quality control, material safety, UV resistance, flame-retardant options and customization capabilities for different international markets and project requirements.

Through its combination of manufacturing capacity, product development, customization and international service, Haining Lingwo New Materials Co., Ltd. continues to develop its role as an artificial turf and artificial plant supplier for global customers.
