

Leasing-Point Expands to 13 Providers and Nearly 59,000 Vehicle Offers

Following its May 2026 relaunch, Leasing-Point has grown from seven to 13 providers and now lists nearly 59,000 active leasing and car subscription offers.

Leasing Point

DRESDEN, GERMANY, September 2, 2026 /EINPresswire.com/ -- Following its relaunch in May 2026, [Leasing-Point](#) is continuing to expand its comparison platform for car leasing and car subscriptions in Germany. Before the relaunch, seven providers were connected to the platform. Today, that number has increased to 13.

“

By the end of the year, we want to have 20 providers connected to Leasing-Point and further increase the choice available to our users.”

Florian Rütz, Managing Director of Leasing-Point

At the same time, the number of available vehicle offers has grown substantially. Leasing-Point currently lists nearly 59,000 active offers. Around 58,000 of these are car leasing offers, while approximately 1,000 are car subscription offers.

Users can currently compare offers for around 900 different vehicle models across more than 70 brands.

With this scale, Leasing-Point ranks among Germany's

leading specialized comparison platforms for car leasing and car subscriptions.

“Our next goal is clear: by the end of the year, we want to have a total of 20 providers connected to Leasing-Point and further increase the choice available to our users,” says Florian Rütz, Managing Director of Leasing-Point.

Car Leasing and Car Subscriptions in One Comparison

The expansion covers both core areas of the platform. Eight providers currently supply leasing offers, while five providers are represented in the car subscription segment.

Car leasing remains the largest part of the platform, with nearly 58,000 active offers. The car subscription comparison currently includes around 1,000 offers.

By combining both models on one platform, Leasing-Point aims to give users a broader overview of different ways to access a vehicle without purchasing it outright.

Personalized EV Subsidies Applied Directly to Vehicle Offers

In addition to expanding the number of providers and vehicles, Leasing-Point is also developing the way offer data is calculated and displayed.

One example is its [EV subsidy calculator](#). The potential level of government support for an electric vehicle can depend on factors such as taxable household income and the number of minor children in the household.

Users can enter these details directly into Leasing-Point. The platform then calculates the potential individual subsidy and applies it dynamically to all eligible vehicle offers in the comparison.

As a result, users can compare leasing rates based on a subsidy that more closely reflects their personal circumstances instead of relying solely on a standardized maximum subsidy assumption.

Further Expansion Planned for 2026

Leasing-Point plans to continue expanding its provider network and vehicle inventory over the coming months.

The goal is to increase the number of connected providers from 13 to 20 by the end of 2026, while continuing to cover both traditional car leasing and car subscription offers.

By combining a growing vehicle inventory with personalized cost and subsidy calculations, Leasing-Point aims to make the German leasing and car subscription market easier to compare and more transparent for consumers.
