

Emagia Named a Leader and a Star Performer in Everest Group's Order-to-Cash (O2C) Products PEAK Matrix® Assessment 2026

Recognition highlights Emagia's Agentic AI platform for autonomous Order-to-Cash and its strongest year-over-year advancement among the 20 vendors assessed.

SANTA CLARA, CA, UNITED STATES, September 2, 2026 /EINPresswire.com/

-- [Emagia](#) Corporation, the [Autonomous Order-to-Cash](#) (O2C) automation platform provider, today announced that it has been named a Leader and a Star Performer in the Everest Group report "Order-to-Cash (O2C) Products PEAK Matrix® Assessment 2026." The assessment evaluated 20 leading O2C products spanning billing and invoicing (including subscription billing) and accounts receivable across all industries and geographies.

Everest Group's PEAK Matrix® evaluates products on two dimensions: market impact — including market adoption, portfolio mix, and value delivered to clients — and vision and capability — which covers vision and strategy, functionality, technology and innovation, and implementation and support. Products are positioned as Leaders, Major Contenders, or Aspirants based on this comparative evaluation. Star Performers are designated separately, based on the strongest year-over-year improvement on both dimensions

Emagia named a Leader and Star Performer in Everest Group's Latest Analysis.

Empowering Autonomous Finance

Emagia is a leading global provider of AI-powered autonomous finance solutions for Order-to-Cash operations

Being named a Leader and Star Performer tells us that our agentic AI business outcome-focused solution approach with a single autonomous end-to-end O2C platform is resonating with enterprises."

*Veena Gundavelli, Emagia
Founder/CEO*

between consecutive assessments; the Star Performer designation reflects momentum rather than an overall market leadership position.

Emagia's dual recognition reflects both its position in the Leader category and its accelerated progress since the previous assessment.

AGENTIC AI FOR THE FULL CASH CYCLE:

Everest Group's research notes that O2C is rising on the CFO agenda as enterprises pursue cash predictability, support new monetization models, and meet rising expectations for stakeholder experience — driving

demand for products that move beyond task-level automation toward increasingly autonomous workflows backed by forecasting, real-time visibility, analytics, and ecosystem connectivity.

Emagia's Autonomous Order-to-Cash platform was built for exactly this shift. Its suite of seven purpose-built AI agents — Order Management, Credit, Billing, Collections, Deductions, Cash Application, and Customer Payments — operates on a single data foundation and is orchestrated by Gia, Emagia's Agentic AI copilot layer. Together, they allow global finance organizations to run end-to-end O2C with autonomous execution and human oversight where it matters.

LEADERSHIP COMMENTARY:

"Being named a Leader and a Star Performer in the same assessment tells us that our agentic AI business outcome-focused solution approach with a single autonomous end-to-end order-to-cash platform is what is resonating with enterprise finance leaders, " said Veena Gundavelli, Founder and CEO of Emagia. "CFOs and shared-services leaders are no longer asking whether AI can help their O2C teams. They are asking how quickly they can run end-to-end O2C - credit, billing, collections, deductions, cash application, and payments as autonomous, connected processes and reach the business outcomes. That is what Emagia's AI agents and Gia were built to deliver, and this recognition from Everest Group reflects the outcomes our customers are achieving today."

PROVEN WITH GLOBAL ENTERPRISES:

Emagia serves large global enterprises across multiple industries, including Xylem, Convatec, Staples, Follett, First Advantage, International Travel Group and others/ Emagia has a proven track record of delivering 80-90% autonomous operations with straight through cash posting, collections, credit, sales order processing e.g., reduction in DSO, cash application auto-match rate, collector productivity gains.
