

TuxCare Joins JFrog's Self-Healing Software Supply Chain Security Ecosystem

TuxCare's SecureChain technology brings continuously maintained, source-rebuilt open-source packages to JFrog Zero-Touch Remediation

PALO ALTO, CA, UNITED STATES,
September 2, 2026 /EINPresswire.com/

-- [TuxCare](#), a global innovator in securing open source, today announced its participation as a founding partner in the JFrog Self-Healing Software Supply Chain Security Ecosystem.

Through the partnership, TuxCare SecureChain will integrate with JFrog Zero-Touch Remediation that enables organizations to automatically identify, apply and attest secure remediation for vulnerable open-source software.

TuxCare's SecureChain provides organizations with a continuously maintained source of secure open-source packages that are rebuilt from source, screened for malware, and continuously patched for known vulnerabilities. Unlike traditional open-source repositories that depend on upstream maintainers to issue fixes, SecureChain extends protection through TuxCare's Endless Lifecycle Support when upstream maintenance ends.

By integrating these capabilities with JFrog Zero-Touch Remediation, organizations can automatically match TuxCare-provided fixes to vulnerable software components and apply them within a policy-driven remediation workflow, helping dramatically reduce the time between vulnerability discovery and remediation.

"Software vulnerabilities are being discovered and exploited at a pace that makes traditional, manual remediation extremely difficult to sustain," said Michael Canavan, Chief Revenue Officer at TuxCare. "We're pleased to be a founding partner within the JFrog Self-Healing Software Supply Chain Security Ecosystem because it brings together complementary technologies that can help organizations move from simply identifying vulnerabilities to automatically resolving them. By making SecureChain's continuously maintained and patched open-source packages available through JFrog Zero-Touch Remediation, we can help customers close critical security

gaps faster, including for software that upstream communities no longer support.”
