

MDPen Marks September as the Start of Microneedling Season

Fall brings renewed focus to Corrective Microneedling™, individualized treatment planning and the FDA-cleared MDPen ULTRA.

ATLANTA, GA, UNITED STATES, September 2, 2026 /EINPresswire.com/ -- MDPen is marking September as the start of [Microneedling](#) Season, a time when practitioners bring patients back after summer to reassess their skin and develop individualized corrective treatment plans.

Microneedling can be done year-round for appropriate candidates, but summer can introduce additional factors that affect the skin. UV exposure, heat, travel and increased time outdoors can contribute to changes in skin texture, tone, hydration and overall appearance. Once fall arrives, practitioners tend to see patients coming back in, ready to address these concerns.

"After summer, many of my patients are looking to address sun damage and skin that appears dull or dehydrated, especially after spending significant time in the sun," said Dr. Gopika Dasari of Ayurva Medical in San Francisco, California. "MDPen microneedling is a great way to help bring that glow back before the holidays. During the fall and winter months, we focus more on hydration and repair and may incorporate treatments such as PRP or PDRN based on the patient's needs."

Climate plays into the timing, too.

"The heat is a major factor in Miami. I advise my patients to stay out of the heat," said Jeniece Bello, Nurse Practitioner at Revitaluxe Aesthetics and Wellness in Miami, Florida. "Therefore, when it cools off, it's the perfect time to do a series of microneedling procedures."

From Microneedling to [Corrective Microneedling](#)™

Microneedling Season centers on MDPen's Corrective Microneedling™ philosophy. It's not about performing the same procedure on every patient. It's about starting with one question: What is the practitioner trying to correct?

That question drives everything that follows. Skin condition, treatment history, Fitzpatrick skin type, treatment area, clinical objectives and treatment parameters all factor into the plan before a single pass is made.

The FDA-cleared MDPen ULTRA gives practitioners a professional platform to work from. Assessment, treatment selection, post-procedure care and follow-up evaluation aren't separate boxes to check. They're one continuous process, and that's how MDPen encourages practitioners to think about it.

The Season for Correction

For MDPen, Microneedling Season isn't just a calendar shift. It's a reason to bring patients back in, take a fresh look at their skin and determine what actually needs to be corrected. Assess the skin. Identify the concern. Develop the plan. Correct with purpose. That's Corrective Microneedling™, and it's the idea behind MDPen's Microneedling Season.
