

ProjectLibre Launches the Most Powerful Cloud Project Management Solution

ProjectLibre Cloud AI 2.0 unites CPM scheduling, AI, resource leveling, Monte Carlo risk, DCMA audits and collaboration in one unrivaled cloud platform.

SAN MATEO, CA, UNITED STATES, September 8, 2026 /EINPresswire.com/ -- [ProjectLibre](https://www.projectlibre.com/) today launched ProjectLibre Cloud AI 2.0, the most powerful professional project management platform available in the cloud. The landmark release gives

project managers, enterprise teams, PMOs and executives one connected environment for critical-path scheduling, portfolios, enterprise resource optimization, project controls, risk analysis, artificial intelligence, cost and performance management, and real-time collaboration.

ProjectLibre Cloud AI 2.0 builds on one of project management's largest global communities. ProjectLibre Desktop - the world's most widely distributed project management software - has reached more than 8.5 million users in 193 countries. The cloud platform carries that proven scheduling foundation into a multi-user, multi-project and AI-enabled SaaS environment built for organizations managing complex work.

For years, organizations moving project management to the cloud have faced a damaging compromise: adopt easy-to-use work management tools without professional scheduling depth, or remain tied to desktop-era systems that limit collaboration. ProjectLibre Cloud AI 2.0 ends that compromise by combining enterprise project controls and modern cloud teamwork on the same live project model.

"Project managers should not have to choose between powerful scheduling and a modern cloud experience," said the ProjectLibre leadership team. "ProjectLibre Cloud AI 2.0 delivers both. Schedules, resources, costs, risk, performance and team actuals remain connected, giving managers and executives a current, reliable view of every project and portfolio."

The most advanced Cloud Project Management

Why Switch from Microsoft Project to ProjectLibre

Compare the capabilities that matter most when moving from Microsoft Project Desktop or Project Online to a modern cloud platform.

Key Capabilities	ProjectLibre AI Cloud AI	Microsoft Project Desktop	Microsoft Project Online Cloud (Legacy SaaS) Retired Sept 30, 2026	monday.com Work, CRM	asana Work Management
1. Real-Time Collaboration	Yes — true real-time co-editing	No	Limited — collaboration, not simultaneous schedule editing	Yes — live collaboration workspace	Yes — collaboration cloud workspace
2. Gantt Chart	Yes	Yes	Yes	Yes	Yes
3. Network Diagram	Yes	Yes	Limited / not native	No	No
4. WBS / RBS / OBS Codes	Yes — full support with visual sync	Limited — WBS only, no full RBS/OBS	Limited — no full WBS / RBS / OBS framework	No	No
5. Resource Leveling	Yes — project & portfolio, preview, undo	Yes — project level	Limited / no portfolio leveling	No	No
6. Enterprise Resource Management	Yes — enterprise pool, cross-project resources, graphs	Limited	Limited	Limited	Limited
7. Earned Value & Performance SPI, CPI, TCPI	Yes — SPI, CPI, TCPI	Yes — basic EVM	Limited	No	No
8. Monte Carlo Risk Analysis	Yes	No	No	No	No
9. DCMA Schedule Quality Audit	Yes	No	No	No	No
10. AI Copilot	Yes — built-in AI Copilot, prompt-to-plan, edit, AI leveling	Limited — separate Microsoft 365 Copilot / add-on, not built into Project	Limited — separate Microsoft 365 Copilot / add-on	Yes — monday AI	Yes — Asana AI / AI Studio
11. Advanced Import MS Project Desktop, Primavera P6	Yes — full-fidelity migration	Yes — import / export	Limited	Limited	Limited
12. Role-Based Access & Team Management	Yes — teams, custom roles, customer access	No	Limited — basic roles / security categories	Yes — teams, enterprise permissions	Limited
13. Pricing	\$9.99 / user / month (Billed annually)	Project Professional 2024: \$1,329.99 one-time OR Plan 3: \$30 / user / month	Plan 3: \$30 / user / month Plan 5: \$55 / user / month	Standard: \$12 / seat / month Pro: \$19 / seat / month	Starter: \$10.99 / user / month Advanced: \$24.99 / user / month

ProjectLibre competitive matrix

The launch is especially timely for organizations planning their future beyond Microsoft Project Online, which is scheduled to retire September 30, 2026. ProjectLibre Cloud provides a complete professional replacement and a direct migration path from Project Online, Microsoft Project Desktop, Primavera P6 and ProjectLibre Desktop - without rebuilding schedules or abandoning project logic, resources, assignments and cost data.

Unrivalled capabilities in one connected platform

AI Copilot operates on a professional Critical Path Method scheduling engine - not a disconnected chat layer. It can create complete schedules from a prompt and edit tasks, durations, dependencies and Work Breakdown Structures directly on the live project model.

Project and portfolio resource management provides true resource leveling at both levels, supported by connected cross-project resource pools. Teams can identify over-allocation, evaluate availability and optimize resources across an individual schedule or an entire portfolio.

Portfolio leaders can see projects, resources, performance and risk together instead of assembling fragmented reports from separate tools. Because every view uses the same current project data, decisions can be made faster and with greater confidence.

Built-in schedule intelligence combines Monte Carlo simulation, completion probabilities and confidence dates with DCMA 14-point schedule-quality audits. Earned Value Management metrics - including SPI, CPI and TCPI - give executives and PMOs objective visibility into schedule and cost performance.

Enterprise scheduling includes critical path, free and total float, constraints, project, task and resource calendars, 11 baselines, WBS/RBS/OBS structures, Network Diagrams and professional Gantt scheduling.

Connected execution closes the gap between planning and delivery. Team members enter actual and remaining work through timecards, project managers apply configurable approval workflows, and approved updates flow directly into the live schedule for immediate impact on progress, cost and forecasts.

Unlike task-centric work management products, ProjectLibre preserves the scheduling logic and project-control disciplines required for complex initiatives. Organizations gain the accessibility of SaaS without surrendering the capabilities professional project managers depend on.

Together, these capabilities create more than a scheduling application. They create a connected operating environment where strategy, resources, execution and risk can be managed with the rigor complex projects demand.

High-fidelity import preserves the essential intelligence in existing Microsoft Project, Primavera

P6 and ProjectLibre Desktop plans, including tasks, logic, resources, assignments and costs. Organizations can move to a true SaaS environment while protecting years of planning work and institutional knowledge.

Availability

ProjectLibre Cloud AI 2.0 is available now for current subscribers and new teams of three or more at \$9.99 per user per month, billed annually. Organizations can start a free seven-day [trial](https://projectlibre.com/trial/) of ProjectLibre Cloud AI at <https://projectlibre.com/trial/>

About ProjectLibre

ProjectLibre is an international project management software company founded by world-recognized leaders in project management software. Its products are used by 8.5 million people in 193 countries, support 31 languages and have been adopted by more than 1,700 universities. ProjectLibre Cloud extends the proven ProjectLibre Desktop foundation into an AI-enabled, multi-user and multi-project SaaS platform with subscribers on five continents.
