

Quorum Launches Quincy Hub, Bringing Its AI Agents Into One Place

New command center gives government affairs teams a single place to manage agents, review their work, and decide what happens next.

WASHINGTON, DC, UNITED STATES, September 9, 2026 /EINPresswire.com/ -- Quorum today launched [Quincy Hub](#), a new command center for the company's AI agents. Quincy Hub gives government affairs teams one place to manage agents, review the work they produce, and set the context for those agents.

“

Quincy Hub brings the work of their agents into one place, so teams can review what's been done, take action, and spend more of their time on the work that requires their judgment.”

Erin Mills

The Hub launches with five agents: Bill Tracker, Campaign Builder, Meeting Prep, CRM, and Policy Comms.

Each is designed to take on a specific part of government affairs work. Bill Tracker reviews legislation and pre-fills configured triage fields. CRM helps capture stakeholder

interactions. Campaign Builder helps grassroots teams start their next advocacy campaign. Meeting Prep builds a briefing ahead of a stakeholder meeting. Policy Comms drafts legislator outreach when a monitored press release is published.

“We're building Quorum for a world where software doesn't just organize the work; it helps do it,” said Alex Wirth, CEO and co-founder of Quorum. “For government affairs teams, that means AI that understands your priorities, takes on meaningful work, and brings you back in when judgment matters. Quincy Hub is the foundation for that shift: more work happening on your behalf, with your team firmly in control.”

Quincy Hub is built around a clear operating principle: the agents do the work, but the user stays in control.

Agent-generated work is surfaced for review. Nothing is automatically submitted or sent without user action. From a single task queue, users can review, edit, approve, complete, or dismiss the work generated by their agents.

One Place to Manage AI Work

Quincy Hub brings together four parts of the agent experience:

Homepage — A starting point for Quincy Chat, along with the three most recently created tasks from a user's agents.

Agent Management — A single view of available agents, what each one does, which agents are enabled, and how they are configured.

Task Management — A unified queue of agent-generated work, with each task linking directly to where the user can take action.

Personalization — A user's preferences and an organization-level "About Our Org" context that agents built to use this context can draw on, without requiring the same information to be provided repeatedly. [Meeting Prep Agent](#) is the first agent to draw on this context automatically, learning both layers directly from conversation.

A user can open Quincy Hub at the start of the day, see what agents have already prepared, act on the work that matters, and move on. Instead of checking separate areas of the platform for an outreach draft, meeting brief, bill review, or campaign prompt, you can now manage those tasks from a single queue.

Five Agents Available at Launch

Quincy Hub launches with:

Bill Tracker Agent — Reviews bills against an organization's priorities and generates a personalized summary with stance, priority, and issue tags.

Campaign Builder Agent — Prompts users to consider a new Write-a-Letter campaign when 30 or more days have passed since the organization's last campaign and helps draft it with Quincy.

Meeting Prep Agent — Generates a personalized briefing before a meeting, including relationship history, legislative activity, PAC contributions, grassroots activity, and public statements. Alongside this launch, Meeting Prep Agent gains memory and personalization: it now learns an organization's priorities and a user's formatting preferences directly from conversation, then applies that context to every future brief automatically.

CRM Agent — Detects when a calendar meeting with a government stakeholder ends and queues up the interaction for a user to log in Quorum, assisting in building institutional memory.

Policy Comms Agent — Monitors configured press release URLs for new content and prepares a legislator outreach email draft in Outbox for review.

Quorum plans to launch future agents through Quincy Hub, giving customers a consistent place to discover, configure, and manage additional agents as they become available.

“Government affairs teams are looking for AI to create leverage, not another layer of work to manage,” said Erin Mills, Chief Marketing Officer at Quorum. “They want the benefits of automation without losing visibility or control. Quincy Hub brings the work of their agents into one place, so teams can review what’s been done, take action, and spend more of their time on the work that requires their judgment.”

Availability

Quincy Hub will be available beginning September 9th to Quorum customers with access to Quincy and Quorum AI Agents. Quincy Hub is available on desktop. [Find out more.](#)
