

Easy-Peasy.AI Launches Marky Agent: An AI Agent With Its Own Computer That Completes Tasks End to End

SINGAPORE, SINGAPORE, SINGAPORE, September 3, 2026 /EINPresswire.com/ -- [Easy-Peasy.AI](#), the comprehensive AI productivity platform, today announced the launch of [Marky Agent](#), a next-generation AI agent that doesn't just answer questions — it does the work. Powered by leading models from OpenAI, Anthropic, Google, DeepSeek, xAI, and Meta, Marky Agent plans multi-step

tasks, executes them in its own virtual computer, and delivers finished results: [deployed websites](#), polished presentations, research reports, generated media, and more.

“

Marky is not a chatbot. It's an agent that takes a task and carries it end to end and it can launch subagents for research along the way. You describe the outcome - Marky does the work.”

Marianna Olefyrenko

An Agent With Its Own Computer

Every Marky Agent session runs inside a dedicated, secure cloud sandbox — a real virtual computer where Marky can run shell commands, execute Python code, read and write files, install packages, and render charts and documents.

Users can watch it work in real time through the “Marky's Computer” panel, which shows live browser screenshots, terminal output, search results, and files as they are created. “Marky is fundamentally different from ChatGPT and Claude because every session gets its own sandbox — a full computer that belongs to the task,” said Dmytro Olefyrenko, CTO and cofounder of Easy-Peasy.AI. “On top of that computer we've built everything an agent needs to be genuinely useful: dozens of tools, connectors to services like Gmail, Google Calendar, Google Drive, Notion, Canva, and GitHub, reusable skills, scheduled and recurring tasks, a dedicated end-to-end website builder, beautiful slide decks, and team collaboration. It's not a chat window with plugins — it's a workspace where work actually gets done.”

From Prompt to Finished Product

Marky Agent's capabilities at launch include:

- A dedicated sandbox per session — an isolated virtual computer with a shell, code execution, and a full file system, so Marky can build, test, and verify its own work.
- Full website builder — Marky scaffolds complete web applications, provisions a real database, iterates with live previews and checkpoints, and deploys to a public URL — from a single prompt

to a shipped site.

- Autonomous web browsing — Marky operates a real browser to research, fill out forms, and verify its work, with a “take over” mode that hands control to the user for logins and sensitive steps while keeping credentials away from the model.
- Slide decks and documents — professionally designed presentations, reports, and files, delivered ready to download or present.
- Connectors — first-class integrations with Gmail, Google Calendar, Google Drive, Notion, Canva, and GitHub, plus support for custom APIs and MCP servers, so Marky works inside the tools teams already use.
- Skills — reusable, uploadable instruction packages that teach Marky organization-specific workflows once and reuse them forever.
- Scheduling — Marky can schedule future and recurring work for itself, running headlessly at the appointed time and delivering results by chat and email — a daily research digest, a weekly report, a recurring content pipeline.
- Task planning and subagents — Marky authors a visible task plan, advances through it phase by phase, and can launch subagents that research and execute in parallel with their own context.
- Media generation — images, videos, music, and human-like voiceovers, generated in-flow as part of larger tasks.
- Team collaboration — shared chats, shared task plans, and team-shared bots and templates, so an entire team can work with — and through — the same agent.

Built Because Customers Asked for It

“Our customers kept telling us the same thing: chatbots answer questions, but their real problems are workflows,” said Marianna Olefyrenko, CEO and cofounder of Easy-Peasy.AI. “They were asking for custom workflows — 'research this market every Monday and send me a summary,' 'build me a landing page and put it live,' 'turn this document into a deck.' Marky is not a chatbot. It's an agent that takes a task and carries it end to end — planning, executing, verifying, and delivering — and it can launch subagents for research along the way. You describe the outcome; Marky does the work.”
