

Anker Unveils 2026 Charging Lineup at IFA, Adding Intelligence to a Category Built on Speed

Six new products bring device recognition, active thermal management and real-time charging visibility to wireless, bedside, desktop and travel charging

BELLEVUE, WA, UNITED STATES, September 3, 2026 /EINPresswire.com/ -- Anker today unveiled its 2026 charging lineup at IFA in Berlin, introducing six products that move the category beyond charging speed toward chargers that recognize connected devices, adapt power delivery and give users greater visibility into the charging process.

For more than a decade, charging has competed largely on wattage. Anker's 2026 lineup adds intelligence. Across the portfolio, products can identify connected devices, optimize charging behavior, manage heat and provide real-time charging information through integrated displays.

The lineup was announced at Anker's press conference at Hall 2.2, Booth 101, Messe Berlin.

Anker MagGo Power Bank 2 Pro

[The Anker MagGo Power Bank 2 Pro](#) is

ANKER

the world's fastest and coolest wireless power bank, delivering performance certified by SGS. True 25-watt Max Qi2.2 magnetic wireless charging takes an iPhone 17 Pro to 50% in 25 minutes, while the power bank recharges to 80% in 52 minutes.

A patented fan control algorithm, dual air ducts and three-layer graphene heat-spreading system continuously pull heat away, keeping the back of the power bank below 96.8 degrees Fahrenheit (36 Celsius) during charging. Competing magnetic power banks typically reach 113 degrees (45 Celsius) or higher, which can cause connected phones to reduce charging power.

A smart display shows real-time power, temperature, battery level and remaining charging time. The 10,000 mAh power bank weighs 220 grams.

Available Sept. 17 in the U.S. for \$109.99 in Phantom Gray, Starlight Silver and Polar Night Blue.

Anker Laptop Charger Pro

The Anker Laptop Charger Pro is the world's first smart laptop charger built to protect battery health, combining 100 watts of GaN charging with intelligent device recognition.

The charger recognizes a connected laptop or device and applies an appropriate charging curve. Users can choose between Auto Fast Charge and Care Mode, which can extend laptop battery lifespan by up to 40% through charging-threshold management, including more granular control between 80% and 100% on supported devices.

An integrated display shows charging power, status, temperature and device information. Desktop software provides charging controls, battery-health trends, monthly maintenance reports and customizable display content.

Over-the-air firmware updates enable future device, protocol and feature support. Measuring approximately 62 by 55 by 34 millimeters, the charger includes a 90-degree foldable plug with pins that fold flat for travel.

Available in the U.S. in October for \$59.99.

Anker MagStand Charging Station

The Anker MagStand Charging Station is a next-generation 3-in-1 bedside charging station combining 25-watt Max Qi2 magnetic wireless charging, active cooling and intelligent overnight charging.

The station includes precise magnetic alignment, a built-in 1.2-meter retractable charging cable

and a hidden rear USB-C port for additional bedside devices. The retractable cable has been tested through more than 10,000 bends and 20,000 retraction cycles.

SnapCool active cooling dissipates heat during wireless charging to help maintain stable performance, while ActiveShield 5.0 continuously monitors temperature.

Care Mode, activated by double-tapping the screen, recognizes the connected phone model, applies an adaptive charging curve and adjusts charging speed based on battery and charging conditions. Charging stops automatically when the battery reaches 100%.

Availability and pricing to be announced.

[Anker Desktop USB-C Hub](#)

The Anker Desktop USB-C Hub is the industry's only dual-display high-refresh-rate hub with a smart display.

The hub supports single-display output up to 4K at 144 Hz or 2K at 240 Hz, and dual-display output up to 4K at 120 Hz or 2K at 240 Hz, including extended mode.

An integrated 2-inch TFT display shows real-time charging power, transmission rate, temperature, port occupancy and connection status. Additional features include a Pomodoro timer, wellness reminders and customizable wallpaper.

Approximately 80% of interfaces are positioned at the rear to reduce visible cable clutter. A 700-millimeter uplink cable provides greater flexibility for desktop placement.

Available Sept. 15 in the U.S. for \$99.99.

Anker Nano Universal Charger (4-in-1, 100W, Smart Display)

The Anker Nano Universal Charger is an all-in-one travel charger designed to work in more than 200 countries.

A built-in plug system switches between international standards, eliminating the need to carry a separate travel adapter. Three USB-C ports and one USB-A port support four devices simultaneously, while PowerIQ 4.0 dynamically allocates available power. USB-C1 and USB-C2 each support up to 100 watts for laptop charging.

Intelligent local-voltage recognition supports 100 to 275 volts and displays local voltage information on a 1.3-inch LCD screen. A compact flat-plug design provides greater stability in

older or loose outlets.

Available Sept. 7 in the U.S. for \$79.99.

Anker Nano Charging Station (6-in-1, 150W, Compact)

The Anker Nano Charging Station brings desktop-level charging into a compact, travel-ready design, turning one wall outlet into a hub for up to six devices.

Four USB-C ports and two USB-A ports provide up to 150 watts of total output. USB-C1 and USB-C2 each support up to 100 watts, while PowerIQ 4.0 dynamically distributes available power as devices are connected or disconnected.

Measuring approximately 149.5 by 67.5 by 22 millimeters and weighing less than 300 grams, the U.S. version includes a 90-degree folding flat plug and soft flat power cable designed for easier packing. ActiveShield 4.0 provides a seven-layer safety system with temperature and charging monitoring.

Available Sept. 9 in the U.S. for \$79.99.
