Boda Stone Releases Six-Point Quality Control Checklist for Granite Monument Importers

The new buyer resource explains how wholesale monument orders can be checked from approved drawings and granite selection through final packing evidence.

Finished granite monument components arranged for batch inspection at Boda Stone's workshop in Hui'an, Fujian, China.

HUI'AN, FUJIAN, CHINA, September 3, 2026 /EINPresswire.com/ -- Boda Stone, a granite monument manufacturer in China, has released a six-point quality control checklist for overseas monument importers, wholesalers, monument retailers and cemetery procurement teams.

The new resource addresses a central concern in cross-border monument purchasing: how can a remote buyer verify that a granite monument matches the approved order before it is packed and shipped?

> Remote monument buyers need evidence that follows the order from the approved drawing to the closed crate."
>
> *William Jiang, General Manager of Boda Stone*

According to the checklist, effective granite monument quality control begins before cutting. The purchase order, approved CAD drawing, material reference, finish map, decoration file and packing requirements should form one controlled order record. Later inspections can then be matched to the same revision instead of relying only on final photographs.

The checklist organizes inspection around six control points:

1. Document and drawing control: confirming the approved revision, component schedule, dimensions, profiles, holes, finishes and accessories.

2. Granite and raw-material approval: checking the agreed granite identity, color range, natural variation and the sample or lot-approval method.

3. Cutting, geometry and joints: recording critical dimensions, thicknesses, base margins, hole locations, mating surfaces and assembly interfaces.

4. Surface finish and edge workmanship: examining polished, honed or textured areas, edges, scratches, chips, tool marks and visible repairs under suitable lighting.

5. Decoration, fit and completeness: comparing carving, etching, panel positions and accessory locations with the approved files and confirming that paired components fit where required.

6. Final identification and packing: reconciling item marks, component pairs, crate identification, packing lists and packing evidence before release.

Granite blocks staged for material selection and production planning at Boda Stone's facility in Hui'an, Fujian, China.

Crated granite monument components secured inside a shipping container before export dispatch.

For remote buyers, the checklist recommends order-linked evidence such as measurement photographs tied to drawing callouts, neutral-light surface images, joint or dry-assembly checks, written decisions for deviations, open-crate photographs and loading records. A final presentation image alone may not show earlier material selection, hidden joints or measured dimensions.

"Remote monument buyers need evidence that follows the order from the approved drawing to the closed crate," said William Jiang, General Manager of Boda Stone. "A structured inspection record helps the buyer and factory resolve differences before shipment, when corrective action is still practical."

Boda Stone's export packaging guide explains that packing should be treated as part of the product specification. Monument components can have substantial weight as well as polished,

carved or exposed edges. Protection therefore needs to reflect the component shape, contact surfaces, handling route and receiving plan. Component codes, crate marks and packing lists can help importers keep multi-piece sets traceable.

For companies evaluating a wholesale headstone supplier, Boda Stone's accompanying importer workflow recommends comparing quotations on the same documented scope. That scope may include every component, granite reference, visible and hidden finishes, decoration responsibility, packing method, destination and the named delivery term.

The resources are intended as practical educational materials rather than a replacement for an order-specific inspection plan, sales contract or professional advice. Importers remain responsible for confirming applicable cemetery requirements, customs rules, destination regulations and carrier terms.

About Boda Stone

Boda Stone is a China-based granite monument manufacturer serving business buyers. The company supports custom monument projects through specification review, CAD approval, granite processing, production inspection and export packing. Its online buyer resources cover monument products, materials, ordering, quality control, packaging and international purchasing considerations.
