AI Game Changers Club Expands Global Executive Ecosystem Around Trusted AI, Human-AI Synergy, Sustainable Value Creation

Stockholm-founded platform is building global momentum across executive chapters, focusing on leadership, business growth and human oversight in the age of AI

AI Game Changers Club founder Emi Olausson Fourounjieva at a global Executive Exchange in Washington, DC

STOCKHOLM, NONE (OUTSIDE UNITED STATES), SWEDEN, September 3, 2026 /EINPresswire.com/ -- AI Game Changers Club is expanding its executive ecosystem, anchored in Stockholm and developing across London, Zurich, Luxembourg, Washington, D.C. (Mid-Atlantic Region) and Dubai.

Founded by Emi Olausson Fourounjieva, the Club connects senior executives, board members, business owners, investors, advisors and transformation leaders.

> As intelligence becomes abundant in the AI era, the truly scarce resources are human connection, judgment, awareness, wisdom, and the ability to see possibilities others cannot."
>
> *Emi Olausson Fourounjieva*

The Club addresses a defining challenge: how leaders, teams and organizations can combine human judgment and machine intelligence to improve decision quality, preserve trust and accountability, and create sustainable business value.

As intelligent systems become embedded in decision-making, leaders must determine which decisions remain fundamentally human, how security and accountability should work as systems become more autonomous, and how organizations can distinguish reliable insight from synthetic certainty.

In a fragmented world, access alone is not an advantage. Trusted access is.

Leaders are navigating accelerated AI development, geopolitical uncertainty, changing markets and increasingly complex decisions. The challenge is no longer finding more information. It is gaining the right intelligence, relationships and strategic perspective at the right moment.

“Trusted, reliable AI solutions will not come from promising perfection. They will come from knowing where responsibility sits, recognizing when something has gone wrong, and having the ability to intervene, learn, recover, or stop when necessary,” said Emi Olausson Fourounjieva, Founder of AI Game Changers Club.

The Club is developing its platform around interconnected priorities: Trusted AI, Human-AI Synergy and Sustainable Value Creation.

AI Game Changers | Executive Intelligence Series

One Trusted Executive Ecosystem. Seven Ways to Create Strategic Value.

The Club's ecosystem spans Executive Membership, Executive Education, Executive Advisory, Strategic Executive Portals™, the Executive Research & Strategic Foresight Lab, Global Executive Exchanges and the AI Game Changers Speaker Hub.

Together, these create value through trusted executive relationships, leadership development, strategic foresight, cross-market access, decision intelligence, thought leadership amplification and opportunities for sustainable business growth.

Through its Executive Research & Strategic Foresight Lab, the Club explores the leadership, governance, ethical and organizational conditions required for AI to generate durable human and business value, including trust at scale and decision quality.

Executive Intelligence Series
The Executive Intelligence Series brings together perspectives from selected members of the Club’s Diamond Advisory Council across different markets and industries, sharing their wisdom, experience and insights on the questions shaping leadership, AI, transformation, governance and sustainable value creation.

It extends the Club’s intellectual layer by giving leaders access to practical executive insight from

experienced voices across the global ecosystem.

The Executive Exchanges create high-trust, closed-door environments where leaders compare perspectives and build relationships across markets.

The next virtual Executive Exchange, From AI Ambition to Trusted Value: Governance, Assurance & the Gap Between Strategy and Execution, takes place on 17 September 2026, 3PM CEST. Participation is subject to confirmation; registration is required. It brings together transatlantic perspectives across leadership, AI governance, risk, trust, audit and assurance to examine how governance can enable better decisions, responsible innovation and value creation.

London Executive Exchange Demonstrates the Model

The London Executive Exchange, held during London Tech Week on 10 June 2026, brought senior leaders together around human-AI synergy, business performance, governance and oversight. The London chapter is chaired by Bernhard Raschke.

The event was featured by CPOstrategy in Human-AI Synergy for Business: Redefining Performance, Growth, and Strategic Advantage in the AI Era, published on 20 May 2026.

The Club's intellectual platform is connected to Digital Transformation & AI for Humans, the podcast founded and hosted by Emi Olausson Fourounjieva, with more than 110 episodes and listeners in 119 countries and territories. Selected members of the Club's Diamond Advisory Council also share their insights through the podcast.

A Strategic Platform for Partners and Members

AI Game Changers Club is developing selected partnerships across AI, enterprise transformation, governance, investment, technology and leadership.

Selected partners can sponsor initiatives, contribute expertise, participate in executive dialogue and strategic foresight, and build trusted relationships with decision-makers across markets.

The Club is also developing executive education, including the Executive AI Breakthrough Masterclass: Lead, Decide and Create Value in the Age of AI, alongside cross-market executive portals designed to help organizations strengthen thought leadership and establish a trusted presence across regions.

For prospective members, the Club offers access to a curated executive ecosystem built around the caliber of its people, perspectives and opportunities.

“The objective is not to build another large professional network,” Emi Olausson Fourounjieva said. “It is to create a high-trust international executive ecosystem where leaders can think more

clearly, challenge assumptions, connect across markets, save time, reduce risks and make better decisions about how human and artificial intelligence should work together to create a brighter future."
