YDelay to Unveil New Trade Fraud Risk Intelligence Framework at Billington CyberSecurity Summit

New framework examines vulnerabilities across the physical shipment journey as cross-border trade becomes more complex and uncertain

TORONTO AND WASHINGTON, DC, September 3, 2026 /EINPresswire.com/ -- YDelay, a practical technology partner focused on turning fragmented processes and unclear requirements into scalable working systems, today announced that it will unveil a new Trade Fraud Risk Intelligence Framework at the 17th annual Billington CyberSecurity Summit, taking place Sept. 8-10, 2026, in Washington, D.C.

The framework is designed to address increasingly important questions for organizations involved in cross-border trade: where can fraud and risk enter the physical journey of a shipment, and where those vulnerabilities might go undetected.

As tariffs, trade policies, geopolitical pressures, regulatory requirements, and international markets continue to shift, the movement of goods across borders is becoming more complex and less predictable. For organizations operating interconnected supply chains, each additional layer of complexity can introduce new opportunities for fraud, disruption, and gaps in visibility.

“Trade risk is often managed in silos but shipments do not move in silos,” said Abhi Arora, Founder and Managing Director, YDelay. “Effective risk management requires a connected view of the entire shipment lifecycle. We believe there is an opportunity to look at trade fraud differently by examining how vulnerabilities can emerge across that journey and how organizations can improve visibility before those gaps become costly.”

YDelay will formally introduce the Trade Fraud Risk Intelligence Framework on Sept. 8 at the Billington CyberSecurity Summit, where government, military, and industry leaders will gather to address cybersecurity challenges in an era of increasingly sophisticated and AI-enabled threats.

YDelay representatives will be available throughout the Summit for conversations with media, industry leaders, and prospective partners.

About YDelay

YDelay, a technology solutions company, works alongside businesses to understand how they operate, combining technical expertise and business problem-solving to turn complexity into practical solutions that deliver measurable results. YDelay helps clients improve operational visibility and controls, reduce risk, and build systems that can scale and evolve with their business. From discovery and design through deployment and ongoing improvement, YDelay stays accountable for the outcome, not just the recommendation.
