

AETHEON Launches Atlas, Turning Human Experience into Actionable Workforce Intelligence

Atlas helps people make their skills visible and gives organizations clearer evidence to inform hiring, development, internal mobility and workforce planning.

SEATTLE, WA, UNITED STATES, September 10, 2026 /EINPresswire.com/ -- [AETHEON](#) today

“

Atlas helps people understand the value of the skills they have built, giving organizations the evidence to recognize potential they might otherwise miss.”

Marie Gill, CEO and co-founder of AETHEON

announced the newest version of Atlas, its skills intelligence experience designed to reveal the skills and potential traditional workforce systems often miss.

As AI rapidly reshapes work, organizations face a fundamental workforce intelligence gap. They may know where people sit and the roles they have held, but not the full range of skills they possess or where those skills could create value.

Atlas closes that gap by translating experience across work,

education and life into structured skills intelligence, helping individuals articulate what they can do while giving organizations an evidence-based view of the strengths, gaps and potential already within their workforce.

Making hidden skills visible and actionable

Traditional talent systems are built around jobs, credentials and employment history, signals that rarely capture the full range of skills a person has developed.

Atlas surfaces skills gained across work, education and life, connecting them to evidence, proficiency and opportunity. For organizations, that creates a clearer picture of the skills and potential within their workforce, informing decisions about development, internal mobility, succession, hiring and workforce transformation.

“One of the things we continue to hear from leaders is that they do not need more workforce data. They need a better understanding of the people they already have,” said Marie Gill, CEO and co-founder of AETHEON. “Atlas helps reveal skills and potential that traditional systems were never designed to see, so organizations can make better decisions about where to develop,

mobilize and invest in their people.”

From experience to skills, evidence and workforce intelligence

Atlas advances AETHEON’s approach to workforce intelligence, grounded in a simple premise: better workforce transformation begins with better understanding.

By connecting experience to skills, evidence and proficiency, Atlas helps individuals see and articulate the value they bring while giving organizations clearer insight into workforce strengths, emerging gaps and future opportunities.

Built on a common skills framework, Atlas can also help educators, workforce organizations and regional leaders better connect skills, talent and workforce demand.

“Human potential is abundant, but much of it remains invisible,” Gill added. “Atlas is designed to help people understand the value of the skills they have built throughout their lives, while giving organizations the evidence to recognize potential they might otherwise miss. When we can see skills more clearly, we can create better pathways between people and opportunities.”

A foundation for what comes next

Atlas builds on AETHEON’s skills intelligence foundation, which is designed to make skills visible, measurable and portable across roles, industries and contexts.

Rather than treating skills as static labels, AETHEON brings together definitions, proficiency, evidence and multiple workforce signals to create a more dynamic picture of what people can do today and how those skills can be applied as work evolves.

The launch of the new Atlas experience represents an important step in AETHEON’s broader mission to help organizations understand their workforce more clearly and help individuals be recognized for the skills and potential they truly possess.
