UD Packaging Highlights Specification-Led PET Strapping for Global Buyers

China-based UD Packaging matches PET strapping, stretch film, closures and equipment to each buyer's load, machinery and shipping requirements.

JIANGYIN, JIANGSU, CHINA, September 4, 2026 /EINPresswire.com/ -- UD Packaging, a China-based industrial packaging manufacturer and export supplier, is introducing global buyers to a specification-led sourcing model designed to simplify the selection of PET strapping, stretch film, closures and strapping equipment.

> "Industrial buyers need more than a general product catalogue. The strap dimensions, tensile range, closure method and machine interface must work together for the load they are securing."
>
> *Candy Chen, Business Manager at UD Packaging*

Industrial packaging components are frequently purchased from separate suppliers. This can leave manufacturers, distributors and logistics operators responsible for determining whether the selected strap, seal, buckle and machine will work together under real operating conditions.

UD Packaging addresses this challenge by beginning each enquiry with the customer's load and packaging requirements. Buyers can provide information such as pallet dimensions, load weight, edge conditions, storage environment, joining method and existing strapping equipment. The company then uses this information to recommend a suitable packaging configuration and prepare a corresponding quotation.

"Industrial buyers need more than a general product catalogue," said Candy Chen, Domestic and International Business Manager at UD Packaging. "The strap dimensions, tensile range, closure method and machine interface must work together for the load being secured. Our goal is to return a practical specification and commercial quotation based on the same operating data."

UD Packaging's core manufacturing activity is PET strapping. Its currently published product range includes six polyester strapping models in widths of 12, 16 and 19 millimeters, with published tensile-force figures ranging from 2,600 to 6,800 newtons. Actual suitability depends on the selected model, load, equipment and application conditions.

In addition to PET strapping, the company supplies industrial stretch film, seals, buckles, manual strapping tools, semi-automatic machines and automatic strapping equipment. This coordinated

product scope allows buyers to discuss multiple packaging components through one enquiry instead of evaluating each item independently.

The company operates a PET strapping production base in Jiangyin, Wuxi, Jiangsu, and an international business division in Suzhou. According to UD Packaging, its production process covers PET granulation through finished reels, helping its technical and commercial teams connect manufacturing requirements with export purchasing needs.

UD Packaging also publishes model-specific third-party testing information for selected PET strapping products. The company states that applicable SGS-CSTC reports and test information based on relevant tensile-testing standards can be provided to buyers upon request. Buyers should confirm the report scope and tested model when evaluating a particular application.

Samples and trial coils are available on request and can be screened against the customer's named tool or strapping machine before shipment. The company lists 1,000 kilograms as an initial request-for-quotation planning quantity, while final minimum order quantities, specifications and commercial terms are confirmed in the written quotation. Available trade terms may include FOB, CIF, FCA and CIP, subject to the destination and order details.

UD Packaging serves industrial packaging applications across sectors including metals, solar products, building materials, wood, paper, chemical fiber, textiles, agriculture, food processing and electronics.

Buyers can review UD Packaging PET strapping specifications and explore UD Packaging strapping equipment through the company's official website.

About UD Packaging

UD Packaging is an industrial packaging manufacturer and export supplier based in Jiangsu, China. Its core manufacturing activity centers on PET strapping, supported by industrial stretch film, seals, buckles, strapping tools and packaging equipment. The company works with overseas buyers to match packaging materials and equipment to specific load, handling and shipping requirements.
