

Hansong Technology Expands Its Global Infrastructure

Hansong expands its global manufacturing and support network with new US, Nanjing, and upgraded Vietnam facilities, alongside expanded OEM and EMS capabilities.

NANJING, JIANGSU, CHINA, September 8, 2026 /EINPresswire.com/ -- Hansong Group has expanded its global infrastructure to support global and regional manufacturing, development, and OEM/ODM programs. The expansion includes a new US facility, an all-new factory in Nanjing, and an upgraded production site in Vietnam.

Hansong Group has made significant investments across its global operations — from a new US facility to an all-new factory in Nanjing and an upgraded production site in Vietnam. The expansion reflects the company's continued investment in manufacturing capacity, production capabilities, and global supply-chain infrastructure.

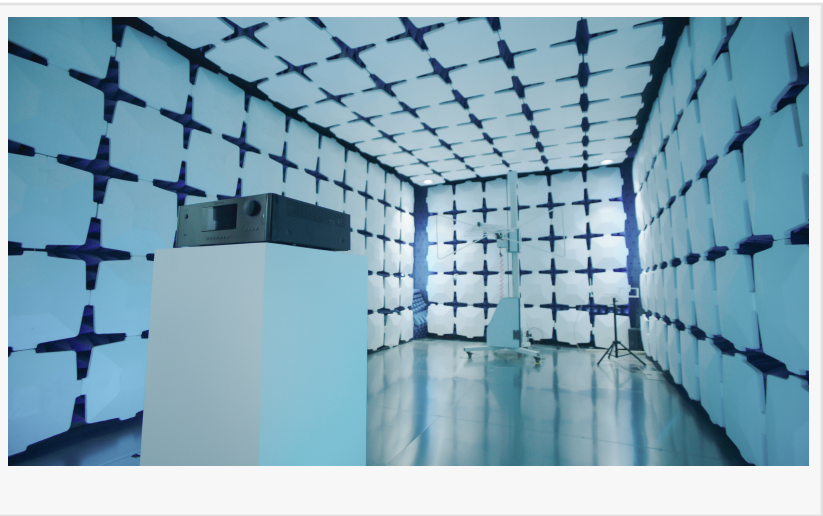

Hansong North America — Orange County, California

Hansong now operates a dedicated US facility at 27136 Burbank, Foothill Ranch, CA — strategically located in Southern California's logistics corridor, with convenient access to major freight routes and the Port of Long Beach. The facility brings Hansong's support closer to North American partners, offering:

Product Demonstrations — The US facility can host scheduled product demonstrations for partner teams, providing an opportunity to experience Hansong's latest platform solutions firsthand.

Third-Party Logistics (3PL) — The facility supports inbound logistics through US-based inventory staging and fulfillment, including receiving, storage, and outbound distribution to help move products to market more efficiently.

Inventory Management — The facility serves as a regional inventory node, keeping buffer stock closer to customers and providing greater supply-chain flexibility and responsiveness to demand.

Rework & Customer Support — Returns, rework, refurbishment, and quality inspection can be handled domestically, helping reduce cycle times and the cost and complexity of post-sale support.

New Nanjing Manufacturing Facility & Global Reach

Hansong's new Nanjing facility has been built from the ground up as its most advanced production site to date. It is purpose-built to support high-complexity electronics programs and reflects the company's long-term investment in manufacturing capabilities.

Facility Highlights

Four major manufacturing sites of purpose-built production space

Fully integrated SMT lines in both Nanjing and Vietnam, optimized for high-mix, high-volume output

Acoustic testing labs and anechoic chambers in the Nanjing and Denmark facilities for audio product validation

Advanced automation throughout, improving consistency and reducing cycle times

World-class certifications and cleanroom specifications

Full operational integration with Hansong's global network and supply chain — from 100 pieces to millions to serve a wide range of production needs

For partners running complex or high-volume programs, the Nanjing facility adds capacity and expanded quality-control capabilities to Hansong's production ecosystem.

Upgraded Vietnam Facility

Hansong's Vietnam facility has undergone a comprehensive upgrade, reinforcing its role as a critical production hub for partners serving US and European markets. With increasing attention on supply-chain diversification and manufacturing origin, Vietnam provides an additional manufacturing option for programs seeking greater supply-chain diversification.

Facility Highlights

Fully upgraded, vertically integrated manufacturing and warehouse space

A mix of production lines with capacity for high-volume as well as low-volume, high-mix production

Specialization in wireless audio, smart home, and connectivity devices

Relevant certifications maintained — ISO 9001, RoHS, and retailer compliance audits

Full Country of Origin (COO) documentation supported for US customs compliance

For brands managing tariff exposure or diversifying their manufacturing footprint, the Vietnam facility provides an established production option supported by Hansong's engineering and quality-control standards across all sites.

Expanded OEM & EMS Capabilities

In step with its facility investments, Hansong has significantly expanded its OEM and Electronics Manufacturing Services (EMS) capacity. The expanded capabilities support larger programs, higher run volumes, and more complex builds while maintaining quality and lead-time performance.

Key Highlights of the Expanded Capabilities

Increased capacity across SMT, final assembly, and packaging operations

Parallel production runs available across Hansong's China, Nanjing, and Vietnam facilities

Flexible MOQ structures to accommodate both scaling brands and established volume programs

Full turnkey EMS — from BOM sourcing and PCBA through to finished goods and fulfillment

Dedicated program management teams for each partner account

Whether supporting an existing product line or a new product launch, Hansong's expanded infrastructure provides the capacity and manufacturing capabilities required for production programs at scale.
