AMEA Oman 2026 Sets the Stage for the Region's Next Wave of Downstream Energy Trade

Petrosil's 7th AMEA Convention & Exhibition brings together the bitumen, base oil, lubricants, additives, waxes and logistics industries on 23 November

MUSCAT, OMAN, September 8, 2026 /EINPresswire.com/ -- Downstream petroleum markets across the Middle East, Asia and Africa are entering a new phase as changing supply patterns, evolving trade routes, infrastructure development and growing demand for supply-chain flexibility reshape the commercial landscape.

Against this backdrop, Petrosil will bring its 7th AMEA Bitumen, Base Oil and Logistics Convention & Exhibition — AMEA Oman 2026 — to Muscat on 23 November 2026, at the Radisson Collection Muscat, Hormuz Grand.

AMEA Oman 2026 will be Petrosil's first event in the Sultanate of Oman. Since 2012, the company has organized more than 20 international industry events across Dubai, Bangkok, Mumbai, Abu Dhabi and Bahrain.

The one-day event will bring together producers, refiners, traders, blenders, lubricant manufacturers, additive suppliers, wax producers, distributors, shipping companies, logistics providers, terminal operators, contractors and end-users from across the AMEA region and international markets.

With more than 25 sponsors and exhibitors already confirmed, AMEA Oman 2026 is set to provide a concentrated meeting point for companies looking to develop commercial

relationships, explore new supply opportunities and strengthen their position across the downstream petroleum value chain.

Oman: A Strategic Meeting Point for Changing Trade Flows

Oman's geographic position makes Muscat a natural setting for a convention focused on connectivity between energy-producing and consuming markets.

Situated alongside the Arabian Sea and close to the entrance of the Arabian Gulf, Oman provides access to maritime trade routes connecting the Middle East with the Indian subcontinent, East Africa and wider Asian markets. Its ports, industrial zones and expanding logistics capabilities further reinforce its role in regional trade.

For petroleum products, geography can directly affect commercial outcomes. Freight costs, vessel availability, storage capacity, terminal access and inland transportation all influence the delivered economics of bitumen, base oils, lubricants and waxes.

Recent disruption across regional shipping routes has further highlighted the importance of resilient logistics networks and alternative routes. Oman's ports have remained operational, while Sohar and Duqm have experienced increased activity as companies have looked for additional options for regional movement and transshipment.

This makes Oman relevant not only as an event destination, but as a practical meeting point for businesses assessing how their supply chains can become more flexible and resilient.

A Bitumen and Downstream Market in Transition

Bitumen demand remains closely connected to road construction, infrastructure development and maintenance across emerging markets. Yet supply conditions are becoming increasingly complex, influenced by refinery configurations, crude availability, product specifications, freight economics and international trade flows.

India provides one recent example of these wider dynamics. Following significant supply pressure during disruption to West Asian crude and product flows, domestic bitumen availability has improved through increased local production and greater use of alternative crude sources.

The broader lesson extends across AMEA. Buyers and suppliers are increasingly evaluating alternative origins, diversified sourcing strategies, dependable logistics partners and different delivery routes to manage changing market conditions.

Base Oils, Lubricants, Additives and Waxes

The same structural changes are affecting the wider downstream value chain.

Base oils, lubricants and additives remain essential to automotive, transportation, industrial and manufacturing activity. Changes in refinery operations, production economics and international trade patterns are influencing sourcing decisions for blenders and lubricant manufacturers.

Waxes serve a diverse range of applications, including candles, packaging, coatings, adhesives, rubber and other industrial uses. Consistent quality, reliable supply and efficient regional distribution remain important considerations for producers and users.

These markets are closely interconnected. A change in refinery economics, crude availability, freight costs or trade flows can have consequences across multiple downstream product categories.

Logistics Moves from Support Function to Strategic Advantage

Supply-chain performance is increasingly becoming part of the commercial proposition itself.

Vessel availability, freight rates, storage, terminal infrastructure, heating requirements, packaging and inland transportation can all influence the final value of a transaction. Recent disruptions to established trade routes have reinforced the need for diversified origins, alternative ports, flexible storage arrangements and dependable logistics partners.

AMEA Oman 2026 therefore places logistics alongside the commodity markets it serves — recognizing that identifying supply is only one part of the challenge; moving that supply efficiently is equally important.

One Day. One Venue. The Entire Value Chain.

At AMEA Oman 2026, the event will connect participants across:

Bitumen — regional supply and demand, grades, specifications, quality and delivery formats

Base Oils & Lubricants — supply flows, sourcing, blending economics and demand trends

Additives — formulation requirements, performance and sourcing

Waxes — supply, applications, trade and distribution

Logistics — shipping, storage, terminals, freight and supply-chain resilience

Building Future-Ready Networks
As downstream markets become more interconnected and supply conditions continue to evolve, competitiveness increasingly depends on relationships that extend beyond individual

transactions.

Producers need dependable routes to market. Buyers need diversified sources. Traders need visibility across changing supply and demand. Logistics companies need stronger connections with cargo owners and downstream customers.

AMEA Oman 2026 is designed to bring these interests into the same room.

By connecting bitumen, base oils, lubricants, additives, waxes and logistics, the convention creates a focused environment for participants to identify opportunities, strengthen commercial relationships and develop supply networks capable of adapting to the next phase of regional trade.

Event Details
AMEA Oman 2026 — 7th AMEA Bitumen, Base Oil and Logistics Convention & Exhibition

Date: 23 November 2026
Venue: Radisson Collection Muscat, Hormuz Grand, Muscat, Sultanate of Oman
Early Bird Deadline: 15 October 2026 — save 25%

About Petrosil

Petrosil (www.petrosil.com) is a UAE- and India-based market intelligence and events company serving the bitumen, base oil, lubricants, additives, waxes and logistics industries. Since 2012, Petrosil has organized more than 20 international industry events across Dubai, Bangkok, Mumbai, Abu Dhabi and Bahrain. AMEA Oman 2026 will mark the company's first event in the Sultanate of Oman.

Petrosil also publishes Bitumart (www.bitumart.com), Base Oil Report (www.baseoilreport.com) and Wax Report (www.waxreport.com), providing market intelligence and industry information for participants across the downstream petroleum value chain.

Connecting the Dots. Bitumen | Base Oil | Lubricants | Additives | Waxes | Logistics
