Influential Women Features Jackie Jolie: Quantum Biology & Light-Based Wellness For Pets At AnimaSol

HARRODSBURG, KY, UNITED STATES, September 8, 2026 /EINPresswire.com/ -- Combining Hands-On Therapeutic Expertise, Personal Transformation, and a Growing Understanding of Quantum Biology to Help Reshape How the Animal Wellness Industry Approaches Health and Vitality

Jackie Jolie, Founder and Chief Enlightened Officer of AnimaSol, is bringing a new perspective to animal wellness by combining nearly two decades of experience in animal bodywork with emerging principles of quantum biology and light-based health. Through AnimaSol, Jackie is working to expand awareness of red and near-infrared light therapy while educating animal health professionals and pet parents about the fundamental role that light, water, and magnetism play in biological function.

Jackie's journey into animal wellness began nearly 20 years ago through her work as a bodyworker for animals, a discipline she describes as being similar to physical therapy for animals. Her career has centered heavily around performance animals, giving her extensive firsthand experience with the mechanics of the body, injury rehabilitation, post-surgical recovery, and the long-term maintenance required to keep animals performing at their best.

Over the course of her career, Jackie has incorporated numerous therapeutic modalities, including laser therapy and PEMF technology. However, her experience repeatedly brought her back to what she considers the foundation of her practice: skilled manual bodywork.

"I have been a bodyworker for animals for close to 20 years, which is like a physical therapist for animals," she explains. "That's where a lot of my knowledge and expertise came from as far as

how the body's connected, how to keep it healthy, how to maintain performance."

Working primarily with performance animals also meant supporting them when injuries or surgeries occurred. Rehabilitation became an important part of Jackie's professional experience, allowing her to develop a deeper understanding of how the body responds to stress, injury, recovery, and ongoing performance demands.

While technologies such as lasers and PEMF machines became part of her toolkit, Jackie consistently found herself recommending her manual work as a core component of animal care.

"It was just me and my hands," she says, emphasizing the importance of direct observation and hands-on understanding of the body.

A Personal Health Journey Opens the Door to Quantum Biology
Approximately seven years ago, Jackie's professional perspective was profoundly influenced by her own health journey after she was diagnosed with Lyme disease.

Already immersed in holistic and alternative approaches to wellness, Jackie chose to pursue a natural healing path rather than conventional antibiotic treatment. She used herbal tinctures, holistic protocols, and dietary changes to address the infection.

Although she successfully healed from the acute infection, lingering symptoms remained. Instead of accepting those symptoms as something she simply had to live with, Jackie began searching for a deeper understanding of what was happening within her body.

That search introduced her to the field of quantum biology.

For Jackie, quantum biology offered a framework for understanding health through three fundamental pillars: light, water, and magnetism. She became particularly interested in the role of light and its relationship to biological processes.

"Quantum biology is really just based off of three pillars, which is light, water, and magnetism, which is truly the three foundations where all living things came to be alive," Jackie says. "Light is at the center of that."

Rather than simply studying the concepts academically, Jackie decided to apply them to herself.

She became her own experiment, incorporating the practices she was learning into her daily life and observing how her body responded. According to Jackie, the results transformed her understanding of health and wellness.

She experienced improvements in areas including hormonal regulation and cognitive function,

while also reporting renewed vitality and overall performance.

Jackie describes the experience as optimizing rather than simply recovering.

She is approaching 42 and says she feels that her brain and body perform better today than they did in her 20s. That personal transformation became an important part of the philosophy that would eventually lead to AnimaSol.

A Beachside Moment Becomes the Beginning of AnimaSol
The idea for AnimaSol came to Jackie during an unexpected moment of clarity.

While lying on the beach and enjoying the sun, Jackie was not thinking about work or attempting to develop a new business concept. Instead, she describes the idea as something that simply came to her.

“God downloaded the invention idea to her brain of a full red light device for animals,” she recalls.

The idea immediately connected her previous professional experience with everything she had been learning about light and biology.

Jackie began looking at the animal industry through a new lens. She saw increasing concerns about chronic illness and disease among pets and performance animals and began questioning whether the animal wellness conversation was addressing one of the most fundamental environmental influences on biological health: light.

Diet, sleep, exercise, supplements, and other approaches receive significant attention when discussing animal wellness. Jackie believes those factors are important, but she also sees light as a missing piece of the conversation.

“The elephant in the room is light, and nobody’s talking about it,” she says.

That realization became the foundation for AnimaSol.

Although the company officially launched approximately two years ago, Jackie had already spent nearly six years developing the concepts, studying quantum biology, exploring technology, and determining how to translate her knowledge into practical applications for animals.

Today, AnimaSol is positioned around two complementary goals: providing red and near-infrared light therapy solutions for animals while educating the animal health industry about the broader principles of quantum biology.

From Animal Bodywork to a Larger Wellness Mission

Jackie's experience gives her a unique perspective on the intersection of technology and hands-on animal care.

Having spent years physically working with animals, she understands that wellness cannot necessarily be reduced to a single modality. Her approach has always involved observing the animal, understanding the body, identifying areas requiring support, and using appropriate tools to assist the healing and performance process.

Her work with AnimaSol expands that philosophy by introducing light into the conversation.

Jackie believes that changing the light environment in which animals live could potentially have implications far beyond individual therapy sessions.

The opportunity, in her view, is particularly significant because of the size of the animal industry and the close relationship between pets and their owners.

"If I can get the pet parent to change the light environment for their pets to be healthier, then we just changed the light environment for the pet parents for them to get healthier," Jackie says.

This broader perspective is central to her vision. Rather than positioning AnimaSol solely as a provider of a particular technology, Jackie wants the company to become part of a larger educational movement around light, circadian biology, and wellness.

Education Remains One of the Industry's Greatest Opportunities
According to Jackie, one of the biggest challenges currently facing the animal wellness industry is education.

She believes that even within natural and naturopathic wellness communities, the conversation around light and its role in biological health has not received enough attention.

There are signs of change, however. Jackie has pursued certification in quantum biology and sees a growing number of practitioners becoming interested in circadian rhythms and circadian biology.

Still, she recognizes that bringing these concepts into the mainstream will take time.

That educational mission extends beyond animal professionals. Jackie also sees an opportunity to introduce quantum biology concepts to students, entrepreneurs, scientists, and future leaders.

When she recently returned to her alma mater to speak to an MBA class, she expected the students might anticipate a conventional business discussion. Instead, Jackie spoke to them about light.

Her message centered on the idea that leadership requires physical resilience and that understanding the biological environment can become an important part of sustaining performance.

For students entering STEM and science-related fields, she sees particularly significant opportunities.

Jackie points to possibilities ranging from changing artificial lighting in schools, offices, and hospitals to creating more opportunities for hospital patients to spend time outdoors. She also envisions architectural and environmental changes that reconnect people with natural light.

“There are so many opportunities to make this movement grow,” she says.

For Jackie, the message is ultimately about creating healthier environments rather than simply treating problems after they emerge.

Lessons in Leadership From Her Grandmother
Jackie’s professional philosophy is also deeply influenced by the people who have shaped her personally.

Her grandmother remains one of her greatest inspirations. Approaching 90, Jackie describes her grandmother as independent, active, and committed to simple daily practices. She walks every morning, prays every morning, maintains a positive mentality, and continues living life on her own terms.

Jackie has watched those habits throughout her life and sees them as a powerful example of resilience.

Her grandmother has taught her the importance of continuing forward, maintaining perspective, managing stress, practicing gratitude, and refusing to become overwhelmed by circumstances.

When stress arises, her grandmother’s approach is simple: take a walk, breathe, pray, and recognize that things are going to be okay.

That philosophy has influenced Jackie’s understanding of both personal and professional success.

She also credits two self-made businessmen in her life who have provided meaningful support and guidance throughout her entrepreneurial journey. Jackie says they helped her in both business and life without asking for anything in return, something she considers especially meaningful as a woman building a business in environments often surrounded by men.

They also demonstrated the importance of persistence.

Their journeys showed Jackie that entrepreneurship does not require having every answer from the beginning. Instead, it requires the willingness to keep moving, learn, adapt, and continue putting one foot in front of the other.

Some of the people who influenced her have experienced significant setbacks, including losing everything and rebuilding again. Their grit, tenacity, faith, and willingness to keep going reinforced Jackie's own entrepreneurial mindset.

Curiosity, Integrity and Emotional Maturity at the Core
Three values guide Jackie's work and personal life: curiosity, integrity, and emotional maturity.

Curiosity has been one of her defining characteristics since childhood. Growing up in a structured environment, she developed a tendency to question what she was told rather than automatically accepting information at face value.

That curiosity continues to shape how she approaches science, business, wellness, and life.

For Jackie, curiosity means remaining open to learning, exploring ideas beyond conventional thinking, and staying receptive to new information.

Integrity is equally important.

To Jackie, integrity means doing what you say you are going to do and being who you say you are, even when doing so is difficult. She considers integrity essential in relationships, business, and community.

She recognizes that everyone is human and that mistakes are inevitable, but she views integrity as a non-negotiable standard for herself and for the people she chooses to work with and keep close.

The third value, emotional maturity, is one Jackie views as an ongoing practice rather than something a person simply achieves.

Building emotional maturity requires self-awareness, accountability, reflection, and a willingness to continue growing.

Interestingly, Jackie says that building and running a business has challenged and developed her emotional maturity more than any personal relationship. Entrepreneurship has repeatedly required her to learn how to respond rather than react while navigating uncertainty, setbacks, growth, and opportunity.

Looking Toward the Future
As AnimaSol continues to grow, Jackie's vision extends beyond creating and delivering light therapy devices.

Her larger goal is to change the conversation around animal wellness by encouraging people to consider the environmental and biological foundations of health.

For Jackie, the future of wellness should not necessarily be about making health more complicated. Instead, she believes there is value in returning to fundamental principles and understanding how the body interacts with its environment.

Her nearly 20 years of experience working directly with animals, combined with her personal journey into holistic health and quantum biology, have given her a perspective that bridges traditional hands-on animal care with emerging approaches to wellness.

Through AnimaSol, Jackie is working to make that perspective accessible to a broader audience.

Her message is ultimately one of education, curiosity, and possibility: by understanding light and its relationship with biology, the animal wellness industry may have an opportunity to explore new approaches to supporting healthier, more resilient animals.

For Jackie Jolie, AnimaSol represents more than a business born from a single idea on a beach. It represents the continuation of a nearly two-decade career spent understanding the animal body, a personal journey that challenged her to rethink health, and a growing mission to bring the conversation about light and quantum biology into the animal industry.

As the company moves forward, Jackie remains focused on what she believes is the most important part of the journey: continuing to learn, continuing to question, and continuing to help animals and the people who care for them thrive.
