

Indian SaaS Startup Socioplace Launches 'Auto,' a Garage Management Software for Independent Auto Workshops

Socioplace introduces Auto, a cloud-based platform for independent auto workshops to manage jobs, billing, customers, inventory, staff, and expenses.

MADURAI, TAMILNADU, INDIA, September 8, 2026 /EINPresswire.com/ -- Indian SaaS company Socioplace has announced the launch of Auto, a [Garage Management Software](#) designed to help independent automobile workshops organize their daily operations through a single platform.

Garage Management Software

Independent garages often manage customer information, repair jobs, billing, spare parts, staff assignments, expenses, and business records across notebooks, spreadsheets, and separate systems. As workshop activity grows, keeping these records updated can become time-consuming and make it harder to maintain a consistent workflow.

“

Auto was built to make everyday garage management simpler by bringing job cards, billing, inventory, customers, and other core workshop operations into one connected platform.”

– Anil Baggio, Founder & CEO,
Socioplace

Socioplace Auto is designed to bring these core workshop activities together, giving garage owners and their teams a centralized way to manage day-to-day service operations.

Designed Around the Workshop Workflow

Socioplace Auto allows workshops to start a job using a customer's mobile number or vehicle number. Existing customer information can be accessed when available,

reducing repeated data entry during vehicle check-in.

The platform also provides [Garage Job Card Software](#) capabilities that allow workshops to create

digital job cards, add services, assign staff, and track the status of a repair. This gives teams a clearer record of work that is pending, in progress, or completed.

By keeping job information organized, workshop staff can follow each vehicle through the service process without relying entirely on paper records.

Simplifying Workshop Billing

Billing is another core part of Auto. Its [Garage Billing Software](#) allows workshops to generate GST invoices using services, spare parts, service packages, discounts, loyalty points, and applicable taxes.

The system calculates invoice totals automatically, reducing the need for manual calculations. Workshops can also configure invoice printing according to their setup, including A4 and thermal formats.

Connecting billing with job and inventory information helps workshops prepare invoices using the work already recorded instead of entering the same details repeatedly.

Inventory, Customers and Daily Expenses

Socioplace Auto also includes inventory management to help workshops organize spare parts and maintain stock information. Inventory records include details such as quantities, buying prices, selling prices, and applicable tax information.

Customer management keeps customer and vehicle information organized, including service and billing records. This helps workshop teams access previous information when customers return.

The platform also includes expense management, allowing workshops to record expense descriptions, amounts, payment modes, dates, and notes. Expense records can be searched and filtered, with views for today's expenses, monthly expenses, and top expenses.

Loyalty and Service Packages

To support customer retention, Socioplace Auto includes loyalty management that allows workshops to configure loyalty points and apply available points during billing.

The platform also supports service package management, allowing workshops to group services and use those packages during the job and billing process.

These functions are designed to remain part of the regular workshop workflow rather than requiring separate manual records.

Cloud-Based and Easy to Set Up

Socioplace Auto is delivered as a cloud-based platform, so workshops do not need to install software on individual computers to get started. The cloud-based approach allows teams to

access the system through the web while keeping the setup process simple.

Socioplace also provides easy setup and migration support to help workshops move from existing manual or digital records to the platform.

The software is available through both web and mobile apps, giving workshop owners and teams more flexibility in how they access and manage their daily operations.

A Connected Platform for Independent Workshops

Socioplace Auto brings together job cards, billing, inventory, customer management, staff management, service packages, loyalty management, expenses, and reports within one platform.

For independent and growing workshops, this approach provides a way to replace scattered records with a more organized digital workflow while keeping the focus on the work already happening inside the garage.

Socioplace plans to continue developing Auto around the operational requirements of automobile workshops and the evolving needs of independent garage businesses.

The launch positions Socioplace Auto as a software solution focused on helping workshops move from fragmented manual processes toward a more connected approach to garage management.
