

Zylpha Reaches 9,000 Registered Users as Legal Teams Continue to Embrace 'Single Platform' for Electronic Court Bundles

Zylpha, has today announced that it has now surpassed 9,000 registered users, marking another significant milestone in the company's continued growth.

LONDON, LONDON, UNITED KINGDOM, September 9, 2026 /EINPresswire.com/ -- [Zylpha](#), the legal technology platform combining electronic court bundling, PDF editing and secure file sharing, has announced that it has now surpassed 9,000 registered users, marking another significant milestone in the company's continued growth.

The achievement follows a strong summer period for the business, with user numbers continuing to rise despite the traditionally quieter holiday months. The consistent growth reflects the increasing demand for practical technology that helps firms and legal departments work more efficiently, reduce administrative overhead and manage documents more effectively.

Designed specifically for legal professionals, Zylpha brings together three essential capabilities within a single cloud-based platform: it's highly regarded [court bundling technology](#), powerful PDF editing tools and secure file sharing. By combining these functions into one solution, legal teams can prepare bundles, edit documents, collaborate with colleagues and securely distribute files without needing multiple disconnected

David Chapman, Head of Marketing at Zylpha

systems.

The growth milestone comes shortly after one of the platform's most significant product updates to date. The release introduced a new integration with [Actionstep](#), enabling users to access and retrieve documents directly from the highly regarded platform when preparing bundles. The integration removes manual processes and creates a more streamlined workflow between matter management and court bundle creation.

The update also included enhancements to Zylpha's connector framework, improved user experience

improvements and the introduction of Email De-threading, one of the most requested features from customers. Designed to simplify the management of lengthy email chains, Email De-threading allows users to separate complex correspondence into individual messages, making email-heavy cases significantly easier to organise, review and include within court bundles.

Early feedback from customers has been overwhelmingly positive, with the new functionality quickly becoming one of the most popular additions to the platform.

Commenting on the milestone, David Chapman, Head of Marketing at Zylpha, said:

"Reaching 9,000 registered users is a fantastic achievement and a clear indication that the legal sector is continuing to embrace technology that delivers genuine productivity gains. What's particularly encouraging is that we maintained strong growth throughout the summer holiday period, which has traditionally been one of the quieter times of the year for legal technology adoption.

"The recent addition of our Actionstep integration and the introduction of Email De-threading demonstrate our commitment to listening to customer feedback and investing in the features that matter most. The response has been incredibly positive. Users are telling us that these enhancements are saving valuable time and helping them manage documents more efficiently.

"As we continue to grow, our focus remains unchanged: providing legal professionals with a simple, powerful platform that combines court bundling, PDF editing and secure file sharing in one place, allowing them to spend less time on administration."

The latest milestone reinforces Zylpha's position as one of the UK's leading providers of digital court bundling technology and highlights the growing appetite among legal professionals for integrated platforms that simplify document-intensive workflows.

With continued investment in product development, new integrations and customer-driven enhancements, Zylpha remains focused on helping legal teams work smarter, collaborate more effectively and prepare court-ready documents in a fraction of the time traditionally required.
