

Hexaview Earns Dual Rocket Software MultiValue Accreditation

NEW YORK, NY, UNITED STATES, September 8, 2026 /EINPresswire.com/ -- The MultiValue database family that Dick Pick designed in the 1960s never went away. It quietly runs order management for global distributors, student records for hundreds of universities, and core ledgers for financial institutions that process billions of dollars a day. What did go away is the workforce that understands it. Today, [Hexaview Technologies](#) announced that Rocket Software, the owner and steward of the MultiValue platform, has recognized the firm as both a MultiValue Accredited Solutioning Partner and a MultiValue AI Solution Partner, effective August 31st, 2026. The dual designation places Hexaview among a small group of firms cleared to deliver both conventional MultiValue services and AI driven modernization under Rocket's own accreditation standards.

The timing is not incidental. Rocket launched its Accredited Partner Program at MV World 2026 to address a problem its customers raise constantly: the MultiValue talent pool is shrinking faster than the installed base. Rocket now advises customers to route modernization projects through its Services and Solutioning team, which refers work only to accredited partners. For an enterprise running a 30-year-old UniVerse or D3 application, that referral list has become the shortest route to a credible partner.

Hexaview earned the AI designation on the strength of Legacy Insights, an agentic AI service purpose built for undocumented codebases. The system's agents read Pick BASIC, UniBasic, and related code at scale, reconstruct dependency graphs automatically, and generate plain language documentation of business rules, data flows, and hidden integrations. The output gives modernization teams what they have rarely had: a verified understanding of the system before they touch it. Early engagements have reduced discovery effort by 65% and surfaced hundreds of undocumented business rules per million lines of code.

"Every failed modernization we have ever been asked to rescue failed for the same reason. Someone changed code they did not understand," said [Ankit Agarwal](#), Founder and CTO, Hexaview Technologies. "Rocket accrediting us on both the solutioning and the AI track means the platform vendor itself has validated that agentic AI can be applied safely to systems where a wrong assumption stops a business. Our job now is to give this community a modernization path that starts with understanding rather than guesswork."

The accreditation is effective immediately. Rocket MultiValue customers can engage Hexaview

directly or through Rocket Services and Solutioning and can request a complimentary Legacy Assessment at www.hexaviewtech.com/modernize-legacy-systems.

About Hexaview Technologies

Hexaview Technologies is a managed agentic services partner for regulated enterprises. The company deploys, operates, and manages AI agent fleets for financial services, healthcare, and government clients. Its portfolio includes HAKI AI (agentic SDLC framework), Legacy Insights, and AI Pods, three-person agentic execution units designed for rapid enterprise deployment. With a global engineering team of 450+, deep legacy modernization expertise, and an outcome-based delivery model, Hexaview is built for the complexity of regulated enterprise environments.
