

N-iX achieves Snowflake Elite Partner status

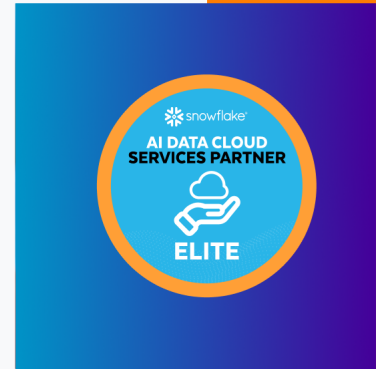

Top-tier status stems from 200+ projects and rapid Cortex AI adoption — including the new CoCo agent, live on 30 estates, cutting migrations to 8–12 weeks.

NORTH MIAMI BEACH, FL, UNITED STATES, September 8, 2026

/EINPresswire.com/ -- [N-iX](#), a global software engineering company that builds and operates AI systems in enterprise production environments, has achieved Snowflake's Elite Partner status for AI Data Cloud services, the highest tier in Snowflake's Partner Network.

N-iX

Snowflake Elite
partner status**

N-iX named Snowflake Elite Tier Partner

The company advanced from Registered to Elite in just over a year, driven by more than 200 Snowflake projects delivered for global enterprise clients.

“

We combine our migration expertise with Snowflake's data-native AI coding agent CoCo, and turn months of manual migration rewriting into a reviewable process that's measured in days.”

*Rostyslav Fedynyshyn,
Director of Data and
Analytics at N-iX*

As an Elite Partner, N-iX offers clients:

- A named Snowflake engineer for an account
- Escalations go to Snowflake engineering instead of standard support
- Clients get early access to the latest Snowflake product roadmap under NDA, so they can design against the new capabilities
- Snowflake co-funds platform assessment, removing costs of a migration business case

For a company evaluating a modernization partner, the tier means Snowflake has already checked and validated N-iX's certifications, delivery record, and customer results.

"Snowflake Cortex AI runs reasoning and search inside a customer's own secure perimeter on live enterprise data. We combine our proven engineering and migration expertise with Snowflake's data-native AI coding agent CoCo (formerly Cortex Code), and turn months of manual migration rewriting into a reviewable process that's measured in days," said Rostyslav

Fedynyshyn, Director of Data and Analytics at N-iX. "On 30 recent projects, around 71% of the data engineering tasks completed by CoCo needed no changes, and Cortex AI was answering questions for the business within 8 to 12 weeks."

More than 100 Snowflake-certified N-iX engineers work across data platform modernization, migrations, data architecture, analytics, and AI/ML enablement.

Among N-iX customer transformations on Snowflake:

- A Fortune 500 industrial supplies and equipment provider that moved its analytics off overloaded on-premises servers to Snowflake. Preparing company-wide data for reporting used to take 12 hours per run and now takes about two, with compute costs down 15%.
- A Fortune 500 global digital content marketplace decommissioned its on-premises SQL Server after migrating to Snowflake and cut infrastructure costs by about 40%. Business users can query data in plain English through a corporate chatbot built on Snowflake Cortex Agents.
- A leading in-flight connectivity provider consolidated data scattered across multiple legacy systems into a unified Snowflake warehouse. The modernization reduced infrastructure overhead, accelerated ETL by 10%, and let the client shift engineering resources from maintenance to new feature development.

"Reaching Elite status this quickly is the direct result of the team's involvement in solving the toughest client challenges: replacing fragile legacy platforms, optimizing performance, and eliminating technical debt. We are excited about what comes next as we continue building market-leading Snowflake AI specializations and helping joint customers move to agentic operations," shared Orest Furhala, Director of Alliances & Partnerships at N-iX.

The fast track to agentic automation with Cortex Code

N-iX uses Snowflake CoCo (formerly Cortex Code) to complete legacy SQL, BTEQ, and ETL migration in 8 to 12 weeks, rather than three or four quarters. The agent converts code, and engineers verify each change before final approval. This leads to a platform that supports live analytics and automation, shifting the focus from merely storing reports to running active analytics. N-iX has run CoCo-assisted modernization across 30 client estates to date, and

N-iX

publishes functional equivalence rates and engineer-hour reductions per engagement.

Existing N-iX clients can request a Snowflake roadmap briefing or a joint architecture review through their account team. Companies planning a Snowflake migration, modernization, or Cortex AI adoption can request [a platform assessment](#) from N-iX's data practice.
