ISR Debrief Podcast explores evolving training needs for intelligence professionals and future operational challenges

The episode features three experienced intelligence leaders discussing evolving doctrine, AI, opps advantages, and the enduring importance of human discernment

WILLIAMSBURG, VA, UNITED STATES, September 10, 2026 / EINPresswire.com/ -- As technological advancements transform the battlespace more rapidly than doctrine can adapt, the question arises: Are intelligence professionals preparing for future conflicts or relying on outdated approaches?

This central question guides Episode 3 of The ISR Debrief, “The One Skill AI Can't Replace in Intelligence,” produced by Integrity ISR.

Host Wesley Rose interviews three retired U.S. Air Force intelligence officers—Chad Hartman, Jason “Stutz” Stutzman, and Jeff “Monty” Montgomery—who collectively possess nearly 100 years of intelligence and training experience.

The panel analyzes how the traditional intelligence cycle faces challenges at the tactical edge, where decisions that once took hours now happen in seconds. Topics include decentralized mission command, the widening gap between reachback and tactical analysts, and the necessity for intelligence professionals to adapt when established doctrine lags behind emerging threats.

The episode also explores live-virtual-constructive (LVC) training, which lets participants make decisions, face setbacks, and adapt in realistic training environments.

Artificial intelligence is also a key focus. While AI can expedite analysis and information processing, the panel emphasizes that technology is only as reliable as its underlying data, highlighting the growing importance of validation and human assessment. “The greatest automated tool ever created is the human mind,” Hartman says.

Despite the rapid pace of technological change, the panel reiterates a fundamental principle: “A good analyst is still a good analyst,” Stutzman says.

When asked to identify the most essential qualities for future intelligence professionals, the guests highlight motivation, adaptability, and judgment. This supports the episode’s central message that, although technology may transform the tools, people remain fundamental to intelligence operations.

Episode 3 of The ISR Debrief: "The One Skill AI Can't Replace in Intelligence"

About the Guests:
Chad Hartman, Senior Vice President of Global ISR Solutions at Integrity ISR, is a retired U.S. Air Force intelligence colonel with more than 30 years of experience across ISR, special operations, and targeting.

Jason “Stutz” Stutzman, Site Lead and Program Manager at Integrity ISR, is a retired U.S. Air Force intelligence major with more than 30 years of experience in ISR, collection management, targeting, and intelligence training.

Jeff “Monty” Montgomery, Senior Instructor and Course Developer at Integrity ISR, is a retired U.S. Air Force intelligence lieutenant colonel with 29 years of experience in intelligence, collection management, targeting, and training.

About Integrity ISR :
Integrity ISR is a veteran-led defense and national security company delivering operational expertise, strategy, training, and consulting across ISR, Space, Targeting, and Electronic Warfare. Integrity ISR trains U.S. Space Force Guardians and other military professionals.

About ISR University:
ISR University, Integrity ISR's education and workforce development division, provides mission-ready training and professional development across ISR, Space, Targeting, and Electronic Warfare.
