

Bandicam 2027 Officially Released With AI Record, Edit & Zoom Suite

This major update transforms Bandicam into an all-in-one suite featuring AI transcription, built-in editing, smart zoom, and advanced virtual webcam tools.

IRVINE, CA, UNITED STATES, September 10, 2026 /EINPresswire.com/ --

Bandicam Company has officially announced the release of Bandicam 2027. Moving beyond its origins as a straightforward [screen recorder](#), the 2027 version introduces a suite of AI-driven features and integrated editing capabilities. This upgrade is designed to reduce workflow

time and simplify the post-production process for content creators, educators, and business professionals.

“

By integrating advanced AI models and built-in editing tools, we've transformed Bandicam from a simple capture tool into a comprehensive, all-in-one content creation suite.”

Denny Oh, CEO of Bandicam Company

By bringing these tools directly into the recording experience, Bandicam 2027 acts as a complete content creation suite. Users can now record, edit, and finalize videos within a single environment.

“Bandicam 2027 is a monumental leap forward,” said Denny Oh, CEO of Bandicam Company. “By integrating advanced AI models and built-in editing tools, we've transformed Bandicam from a simple capture tool into a comprehensive, all-in-one content creation suite.”

A central addition to Bandicam 2027 is the new [AI Transcription \(Speech to Text\)](#) capability. This feature

converts recorded audio and video into text, generating subtitles, meeting minutes, and transcripts without manual typing. The software uses a hybrid approach, offering high-speed local models and cloud-based Premium AI models (Bandicam AI/AI+) through AI credits for high accuracy and processing speed.

Alongside the transcription tools is a Built-In Video Editor. Creators no longer need to export their files to third-party software for basic adjustments; they can simply trim the beginning or end of a video and execute audio trimming directly within the Bandicam interface immediately after capture.

For educators and professionals who rely on presentations and software tutorials, the new Smart Zoom feature improves viewer engagement. The tool automatically zooms in and out based on mouse clicks, highlighting key details on the screen without requiring keyframing in post-production.

Privacy and visual presentation have also been updated. The [AI Virtual Webcam Background](#) feature allows users to adjust their facecams with a single click, offering options to blur the background for privacy, remove it entirely, or replace it with a custom image. Furthermore, the Multi-Area Blur function provides on-screen security, allowing users to blur up to three sensitive areas simultaneously, such as passwords, personal emails, or financial information, during a screen recording.

“Our goal is to dramatically streamline the workflow for our users,” Oh added. “Features like AI transcription, auto-editing, and smart zoom eliminate tedious manual work, empowering creators to focus entirely on delivering high-quality content.”

For users looking to do more with their recordings, Bandicam 2027 offers Advanced AI Features accessible via AI credits. These credits provide access to automated post-production tools, including auto-editing to remove silent parts of a recording, automatic subtitle translation, content summarization, quiz generation, and automatic highlight creation. Additionally, a new "AI Studio" tab links users directly to generative AI tools, such as an AI Video Generator and AI Image Generator, expanding creative possibilities.

About Bandicam Company

Since its start, Bandicam Company has developed accessible multimedia software. Originally launching as a reliable PC screen recorder, the platform has grown into a utility used by millions worldwide. The company is dedicated to continuous improvement, with plans to integrate artificial intelligence across its software ecosystem. By developing practical, AI-powered solutions, Bandicam Company remains committed to helping creators, educators, and enterprises produce professional content easily.
