# CleanHaus Introduces AI-Agent to Solve the Growing Complexity of Short-Term Rental Turnovers

*New AI-powered platform automates turnovers for vacation rental property hosts on Airbnb and Vrbo hosts by connecting bookings directly with operations teams.*

PORTLAND, OR, UNITED STATES, September 9, 2026 /EINPresswire.com/ -- Managing short-term rental turnovers has become increasingly complex as hosts and property managers balance changing reservations, cleaner availability, scheduling updates, and guest expectations. CleanHaus™ is simplifying that process with an automated turnover management platform designed to connect booking activity directly with cleaning and maintenance operations.

Today, CleanHaus released its mobile app and website to help professional property managers, Airbnb and Vrbo hosts, and their cleaning teams put turnovers on autopilot by managing the workflow of scheduling, task completion, and payments. When a guest books, changes, or cancels a reservation, CleanHaus automatically updates the corresponding work schedule, reducing the manual coordination required to keep properties guest-ready. You can connect your Vrbo and Airbnb calendar to CleanHaus, making it easy to add your listings and keep upcoming stays and turnovers in sync.

At the center of the product is Broomy™, CleanHaus' AI-powered coordination assistant. Broomy helps manage cleaner notifications and scheduling updates in the background, giving hosts and property managers a more predictable way to manage turnovers without relying on constant text or WhatsApp messages, calendar updates, or manual reminders. Like traditional LLMs, Broomy uses a chat interface to perform tasks on behalf of managers, cleaners, and contractors. Broomy responds to things like, "Hey Broomy, make sure firewood is restocked during the next turnover", "Reschedule my cleaning to 3:00pm tomorrow", or "I just added 3 bottles of olive oil to the supply cabinet, please update the inventory." Importantly, for cleaners in particular, Broomy alleviates the need to navigate through traditional UI in the app itself.

"CleanHaus was purpose built to alleviate the 'death by a thousand cuts' challenge of managing property turnovers and field service teams. Our platform increases the efficiency of operations dramatically, reducing noise so property managers and hosts can focus on growing their business and creating better guest experiences," said Nat Parker, CEO and Co-Founder of CleanHaus.

Unlike traditional turnover workflows that are largely manual or rely on connecting several different software platforms such as a PMS, cleaning app, and payments app, CleanHaus handles the entire workflow, escalating only the most important issues to a manager's attention. The platform is designed to support both individual hosts managing a handful of properties as well as professional operators managing hundreds. It also supports cleaning managers who can schedule and track the work of a team of cleaners.

"As we built and tested the CleanHaus platform, we saw that cleaners themselves also lacked an easy way to plan and manage their work. With CleanHaus, solo cleaners and cleaning companies can move from juggling SMS/ WhatsApp messages, notes, Google calendars, PayPal, Venmo, and Zelle to an integrated platform that is easy to understand, multi-lingual, and free to use."

As the short-term rental industry continues to mature, operators are looking for technology that helps simplify the day-to-day challenges behind successful guest experiences. CleanHaus is helping modernize turnover management by automating the coordination work that happens behind the scenes every stay.
CleanHaus is available for download. To learn more about automated turnover scheduling and how CleanHaus helps short-term rental operators save time, visit cleanhaus.ai.

About CleanHaus
CleanHaus is an automated turnover management platform built for Airbnb and Vrbo hosts, property managers, and cleaning teams. By connecting booking calendars directly with cleaning operations, CleanHaus helps automate scheduling, improve communication, and simplify the turnover process from reservation to reset.
