QuikStor and Storagely Integrate to Turn Website Traffic Into Rentals, Automatically

New integration syncs real-time unit availability and pricing from QuikStor into Storagely-powered websites.

WINSTON SALEM, NC, UNITED STATES, September 10, 2026 / EINPresswire.com/ -- QuikStor, the modern SaaS operating platform for the self-storage industry, today announced a new integration with Storagely, a leading provider of conversion-focused websites and online rental systems for self-storage operators.

Turning Traffic into Revenue, Day and Night

Many storage websites don't have traffic problems. They have rental problems. Visitors show up, but if a slow or disconnected checkout greets them, they will lose the customer before they ever sign a lease. The QuikStor–Storagely integration closes this gap. Unit availability and pricing sync from QuikStor into a facility's Storagely-powered website in real time, so renters always see accurate inventory, no matter how often it changes. When a renter completes a lease, the reservation and lease data flow straight into QuikStor. No re-entry, no reconciling two systems, no gap between what a renter booked and what's on the account.

> “Now, a renter visiting a Storagely-powered website can book from their phone at midnight, and the lease is sitting in QuikStor before the manager opens the store the next morning.”
>
> *Tony Gardner, Vice President at QuikStor*

"Operators shouldn't lose a rental because two systems can’t talk to each other," said Tony Gardner, Vice President at QuikStor. "Now, a renter visiting a Storagely-powered website can book from their phone at midnight, and the lease is sitting in QuikStor before the manager opens the store the next morning. That's automation doing the work an employee shouldn’t have to do by hand."

Storagely: Decades of Serving Self Storage

Storagely's 20-year track record means operators who use Storagely-powered websites see an NOI increase:
85% average increase in online rentals for facilities on Storagely
$6.5M in revenue recovered across their customer base through abandoned rental recovery
$4.5M saved on Google Ads by operators who no longer need to pay to make up for a leaky checkout
60-second rentals, 30-second reservations, from search to signed lease

"We've seen what QuikStor has built, and the tools, features, and options they are presenting operators share the same innovative pride that we carry. We are excited to open up our own customers to the world of QuikStor, and are hopeful of what this integration will unlock for operators industry-wide," said Austin Simmons, CEO of Storagely.

What Operators Get:
-Live inventory, never stale. Real-time unit availability and pricing pulled straight from QuikStor onto the operator's Storagely website.
-Rentals that stay on your site. The full transaction completes on the operator's branded website and passes back to QuikStor with no manual entry.
-Updated single-page checkout. A newly reimagined single-page, 60-second rental system with more upsell features, merch shop, and VBP options.
-ATLAS location profile manager. A new single source of truth for storing and editing all location details. Edit all locations, a custom group, or one at a time.
-Google Business Profile Sync. Update your GBP and watch it sync to ATLAS automatically, editing your site in real time.
-FLEX website editor. A drag-and-drop, component-based editor built for the novice and expert alike.
-Snap Size guide. Snap photos of rooms or items to store. Storagely analyzes those images, curates the items, visualizes the perfect unit, and allows a renter to head straight to checkout.
-Interactive Facility Maps. Renters can now rent straight from an interactive facility map, just like buying concert tickets or picking seats on an airplane.
-Wingman AI suite. Your dedicated AI copilot for creating SEO content, FAQs, blogs, reviews, and website copy.
-Reserve with Google. Now for more than just the REITs. Feed your inventory directly to maps, along with a button to "book" right from the map.
-Abandoned rental recovery. Customize your follow-up process, so renters who drop off mid-checkout don't become lost leads.
-No per-integration fee. Consistent with QuikStor's open, free integration model.

Storagely will begin an immediate waitlist for interested QuikStor facilities, with first launches scheduled for Q4 2026. Operators can learn more and request a demo at Storagely.io.

About QuikStor
QuikStor is the modern SaaS operating platform for the self-storage industry, built by operators,

for operators. QuikStor delivers a fast, reliable, purpose-built facility management system designed to power intelligent automation and streamlined operations. Backed by trusted self-storage industry veterans and privately held, free of outside investor pressure, QuikStor combines deep operational expertise with modern architecture to give operators the confidence, performance, and long-term partner they need to scale. Learn more at QuikStor.com.

About Storagely
Storagely is a website and online rental platform, specifically for the self-storage industry, built around the way you operate. With an innovative and solution-first approach, Storagely helps operators create high-performing websites, giving them more control over edits, managing locations and content at scale, faster launches, and exclusive features...with the flexibility and control they need to move at their own pace.
