

Solution Synergy Announces Expanded AURA AI Capabilities for Healthcare Organizations

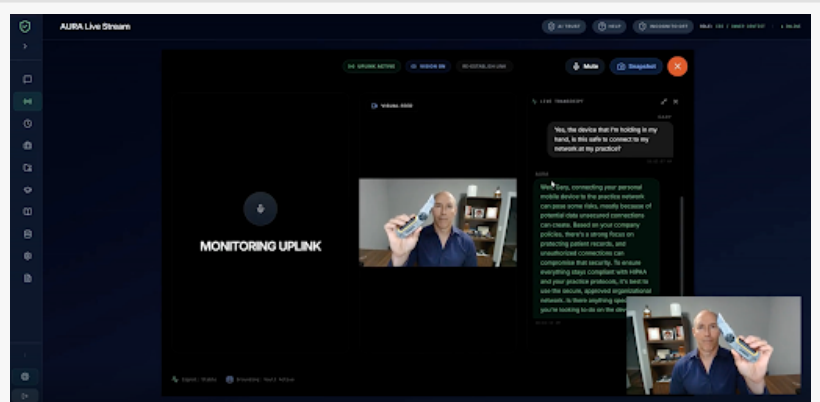

AURA can now analyze what it sees using an organization's own information, with new voice, training, and document capabilities.

GILBERT, AZ, UNITED STATES,
September 15, 2026 /

EINPresswire.com/ -- [Solution Synergy](#),

a provider of cybersecurity and AI governance solutions, has announced expanded [AURA AI capabilities](#) for healthcare organizations. Developed by Black Talon Security, [AURA AI](#) uses an

organization's own policies, procedures, documentation, and internal information when generating responses.

AURA AI's Visual Feed identifies a potential surgical-room contamination risk

Until now, that organization-aware approach was applied primarily through text-based interactions. The expansion introduces real-time vision, voice role-play and coaching, customized training, content creation, and document search and analysis.

“

The capabilities of general-purpose AI have developed incredibly quickly. As AI moves beyond text and into more workflows and types of work, organizational context needs to extend with it.”

Steve Bouck

In one demonstration, AURA identified a utility knife left on a surgical counter and flagged the potential contamination risk. In another, it converted hospital-approved implant-tray instructions into a visual staff guide.

The expansion marks a shift from using organization-aware AI primarily to retrieve and explain information to applying that information across visual, spoken, training,

and analytical tasks.

The expanded capabilities are available in AURA AI as of September 15.

About Black Talon Security

Black Talon Security is a healthcare-focused cybersecurity company and the developer of AURA AI and EAGLEi cybersecurity software.
