Starquest Studio Launches VoiceMaxx AI, Bringing Measurable Voice Training to iPhone

Starquest Studio today announced the official launch of VoiceMaxx AI, designed to help people build deeper, steadier and more controlled speaking voices.

New voice coaching app combines guided exercises and community feedback to help users deepen their voice and improve their communication

PITTSFIELD, TX, UNITED STATES, September 10, 2026 / EINPresswire.com/ -- Starquest Studio today announced the official launch of VoiceMaxx AI, a voice training app designed to help people build deeper, steadier and more controlled speaking voices through measurable practice.

Now available on the Apple App Store, VoiceMaxx approaches voice improvement as a trainable skill rather than an abstract question of confidence. Users begin with a free Voice Test that measures characteristics of their speaking voice and provides a Depth Score. They can then work through more than 25 exercises targeting specific components of vocal performance.

> Voice can affect the impression you make before someone has had much time to evaluate what you're saying. For a job interview, a presentation, a first date or even a voice message, delivery matters."
>
> *Adam Circle*

"Most advice about speaking confidently is too vague to practice," said Adam Circle, founder of Starquest Studio. "We wanted to break voice improvement down into behaviors people can actually work on: unlocking their most powerful voice, speaking more slowly, reducing filler words, and improving their tonality. Then we give users a way to measure whether they are actually improving."

VoiceMaxx includes exercises for breath support, resonance, projection, and vocal depth, alongside speaking practice focused on common communication habits. Users can practice slowing their speech, reducing words such as "um" and "uh," strengthening sentence endings and delivering ideas more clearly.

The app also provides live feedback designed to make vocal habits easier to identify. Rather than simply telling users to “sound more confident,” VoiceMaxx gives them specific elements of their delivery to observe and practice.

Now available on the Apple App Store, VoiceMaxx approaches voice improvement as a trainable skill rather than an abstract question of confidence.

Built for the Conversations That Matter

VoiceMaxx is designed around both professional and social communication.

Users can rehearse for meetings, presentations, dates and everyday conversations before entering the real situation. Short practice sessions are intended to make improved speaking habits increasingly natural rather than forcing users to consciously remember a list of communication rules while they speak.

The approach reflects a broader premise behind VoiceMaxx: people routinely invest in improving how they look, what they know and what they say, while often paying far less attention to how they actually sound.

“A voice can affect the impression you make before someone has had much time to evaluate the substance of what you're saying,” Circle said. “For a job interview, a presentation, a first date or even a voice message, delivery matters. VoiceMaxx gives people a place to deliberately train that part of themselves.”

AI for Improving the Human Voice, Not Replacing It

VoiceMaxx enters the market at a time when much of the conversation around artificial intelligence and voice technology is centered on generating synthetic speech or cloning human voices. Voicemaxx is taking a different approach: using technology to help people improve their own voices.

“The goal isn't to generate a better voice for you,” Circle said. “It's to help you develop your actual voice. AI should be able to make human skills easier to understand and practice, not just automate them away.”

Users can retake the Voice Test over time and compare their results as they train, turning a quality that can otherwise feel subjective into something they can monitor more systematically.

Adding Human Feedback to Voice Training

VoiceMaxx also includes Voice Arena, a community feature that allows users to share voice

recordings and receive feedback from real people.

The feature addresses one of the fundamental difficulties of voice training: speakers do not necessarily perceive themselves the same way listeners do. Voice Arena gives users an additional source of feedback beyond automated measurements and self-assessment.

Together, the Voice Test, guided exercises, real-time coaching and community feedback create a training loop built around measurement, deliberate practice and outside evaluation.

VoiceMaxx AI is available now for iPhone. Users can download the app, take the free Voice Test and access a free trial of the complete training experience.

About Starquest Studio
Starquest Studio is a Massachusetts-based software company developing consumer applications focused on personal growth and self-improvement. VoiceMaxx AI is its voice coaching platform for helping users better understand, train and improve their speaking voices.
