

DataPatrol to Showcase Visual Data Security at GISEC Global 2026

DataPatrol will demonstrate how Visual Data Security protects sensitive information across screens, web applications, mobile devices, and print.

DUBAI, UNITED ARAB EMIRATES, September 11, 2026 / EINPresswire.com/ -- [DataPatrol](#), a leading provider of [Visual Data Security solutions](#), has announced its participation at GISEC Global 2026, taking place from 16 to 18 September at the Dubai Exhibition Centre, Expo City Dubai.

At the event, DataPatrol will demonstrate how its [Visual Data Security](#) solutions help organizations protect sensitive information at the point where conventional data protection controls often lose visibility: when data is viewed, captured or printed by an authorized user.

As governments and enterprises across the Middle East and Africa accelerate cloud adoption, digital transformation and AI adoption, employees are interacting with sensitive information across a growing number of applications, devices and working environments. While existing security controls protect data at rest and in transit, information displayed on a screen can still be photographed, captured, copied or shared outside approved channels.

DataPatrol addresses this exposure through a unified suite of technologies designed to deter unauthorized disclosure, strengthen accountability and help organizations investigate incidents involving data in view.

“Organizations across the region are investing heavily in protecting their data, but an important gap remains once that data becomes visible to a user,” said Loay T. Hussein, Managing Director at DataPatrol. “GISEC gives us the opportunity to demonstrate how Visual Data Security extends protection into this final stage of data access without disrupting legitimate work.”

Screen Watermarking for Visual Data Security

DataPatrol's Screen Watermarking solutions enable organizations to display persistent, customizable watermarks containing details such as user identity, device information, timestamps and other contextual data. These visible identifiers discourage unauthorized sharing and help security teams determine who was viewing sensitive information when an incident occurred.

The solutions support different operating environments, security policies and deployment requirements. Organizations can define where watermarks appear, what information they contain and which users, devices or applications require protection. This lightweight approach allows security teams to strengthen oversight while maintaining a practical user experience.

For organizations operating across the MEA region, this capability is particularly relevant in sectors such as government, banking and financial services, healthcare, energy and critical infrastructure, where employees and third parties routinely access confidential, regulated or commercially sensitive information.

DataPatrol's participation at GISEC also reflects the company's continued commitment to the regional cybersecurity market. By combining specialized Visual Data Security technology with an understanding of local business, compliance and operational requirements, DataPatrol helps organizations extend their existing security strategies beyond files, networks and endpoints to the information users can see.

"Visual data exposure is not limited to a single device or application," added Hussein. "Organizations need consistent protection across every environment in which sensitive information is displayed. Our goal at GISEC is to help security leaders understand this risk and see how it can be addressed as part of a broader data protection strategy."

Visitors can meet the DataPatrol team throughout GISEC Global 2026 at Hall 5, Booth B90, and explore how Visual Data Security can protect sensitive information across screens, web applications, mobile devices and printed documents.

About DataPatrol

DataPatrol is a leading provider of Visual Data Security solutions designed to protect sensitive information while it is being viewed. Its technology helps organizations deter unauthorized sharing, maintain user accountability and investigate visual data exposure across screens, web applications, mobile devices and printed documents.

DataPatrol supports government entities and enterprises in highly regulated industries across the Middle East, Africa and international markets.
