PhotoToolFinder: A New Directory Exclusively for Online Photo Editing Tools

It features 37 categories of web-based photo-editing tools that can be filtered by price, ease of use and platform.

The PhotoToolFinder home page

The Photo Enhancers section

SAN FRANCISCO, CA, UNITED STATES, September 10, 2026 / EINPresswire.com/ -- PhotoToolFinder, a directory that exclusively lists online photo editing tools, has launched at phototoolfinder.com. It covers 37 categories of photo editing tools including background removers, glare removers, red eye removers, photo enhancers, image upscalers, photo restoration tools, denoisers, image converters, image compressors, AI photo editors, drawing and painting web apps and more. In each category, PhotoToolFinder allows filtering by price, ease of use and platform. This means that a question like "what are all possible image upscalers that are free to use?" can easily be answered by filtering image upscalers on the site.

The home page has a search box where one can search by the job that needs to get done (e.g. 'background changer'). Alternatively, one can go to the appropriate category and look through the options.

Each tool's listing page in PhotoToolFinder is written objectively, listing its key features, pros and cons, and answers common questions people ask about the tool. The details of each tool are not a vendor's marketing copy: they are written after independent research.

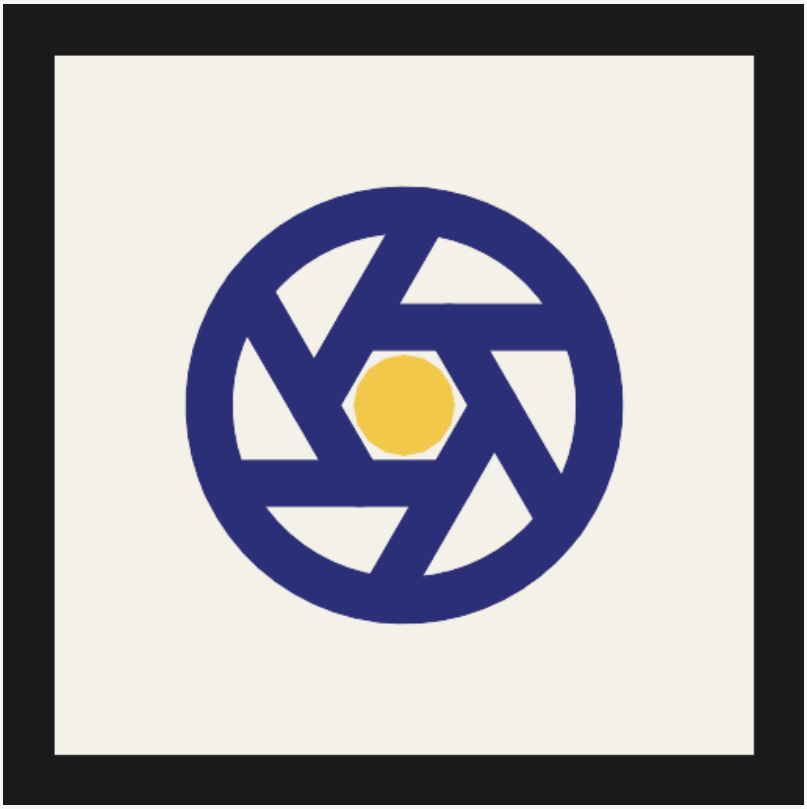

Every tool's page also mentions who should skip the tool. For instance, a general image upscaler's page tells you not to use it if you are enlarging anime or drawn art, but suggests

anime upscalers because they keep the line work cleaner.

Tools are filterable by ease of use because a person fixing one holiday photo would not want to learn professional software for the purpose.

Everything in the directory works in a browser. Tools that also run on Windows, Mac, Linux, iOS or Android are marked as such.

Developers and companies that make photo editing tools can suggest their own products through a form on the site. Submissions are free for a limited time but there is a stringent review process before a tool is approved.

PhotoToolFinder's logo

"My aim is to build a reliable, comprehensive database of photo editing tools on the Internet. With the rise of AI, there are more photo tools than ever and I thought it would be a good idea to provide an easy-to-filter list of web-based tools grouped under various categories," said Megh Chirravoori, the creator of PhotoToolFinder.

PhotoToolFinder is free to use and needs no sign-up.

About PhotoToolFinder

PhotoToolFinder (phototoolfinder.com) is a directory dedicated to online photo editing tools, founded by Megh Chirravoori. Tools are grouped by the job the user wants done, searchable as you type, and filterable by price, ease of use and platform. Every tool has its own page, written after independent research, covering what it does, what it is good at, where it falls short, and the questions people actually ask about it.
