

EvolveWare Recognized in the Inaugural Gartner® Magic Quadrant™ for AI-Augmented Code Modernization Tools

EvolveWare's Intellisys platform was recognized for its abilities to reduce risk in legacy system transformation.

SANTA CLARA, CA, UNITED STATES, September 14, 2026 / EINPresswire.com/ -- EvolveWare, a provider of AI-augmented modernization solutions through its Intellisys™ Platform, announced its inclusion as a Niche Player in the inaugural 2026 Gartner® Magic Quadrant for AI-Augmented Code Modernization Tools.

"From day one, our Intellisys Platform's approach to modernization has centered on a comprehensive understanding of the systems in-scope, and the flexibility to customize deliverables that have resulted in successful outcomes for our clients," said Miten Marfatia, CEO of EvolveWare. "As we incorporate generative AI technologies for further acceleration, we are directing additional focus to safeguarding the privacy and security of our client's intellectual property. We believe Gartner's recognition reflects our attention to these two equal priorities."

A Unique Approach to Modernizing Legacy Systems

Rather than translating legacy code line by line, EvolveWare's Intellisys Platform uses patented technology to fully decompose legacy systems and extract its metadata that includes detailed logic, context and dependencies from the source code. This capability spans 20+ programming languages including COBOL, RPG, Oracle Forms & Reports, PowerBuilder, Java, and C#.

This metadata repository is the foundation that powers the success of multiple AI augmented modernization paths – whether it's extracting business rules to move to a modern platform, generating language-agnostic user stories to build a modern system, or generating technical

Chief Executive Officer in the IT Services Industry gives Intellisys Platform 5/5 Rating in Gartner Peer Insights™ AI-Augmented Code Modernization Tools. Read the full review here: <https://gtmr.io/KJlC8EuSb>

specifications that can then be transformed into modern refactored code.

This methodology of "understand first, modernize thereafter" is designed to reduce the risk of simply porting flawed or outdated logic into a new architecture.

Data Privacy - Essential for Regulated Industries

The Intellisys Platform incorporates features that are critical for the specific demands of highly regulated sectors, with significant adoption across government agencies, insurance companies, financial firms and others. The company's on-premises and private cloud deployment models are designed to meet the strict data privacy and compliance requirements these industries require — an approach that stands apart from modernization tools built primarily for cloud-first environments.

In addition, all AI models used are locally installed. Intellisys does not go out to the cloud to pick up data or any model updates to preserve data security.

EvolveWare has worked with organizations around the world, including those based in Europe, South America, and Asia. Yet its deepest penetration is in North America, where the company has had years of experience working with organizations that follow compliance frameworks and government modernization mandates — a focus the company sees as core to serving its government and regulated-industry customer base effectively.

What Customers Are Saying

In a Gartner Peer Insights™ Review, an IT Services CEO who partnered with EvolveWare on modernization projects summed up the benefits of the Platform as follows: “The automation embedded within the platform significantly reduces manual effort, minimizes human error, and accelerates delivery timelines without compromising quality.”
