

Alderfer Glass Dispels Popular Myths About Car Windshields

Alderfer Glass is helping local motorists make informed decisions by dispelling the most popular myths about car windshields.

TELFORD, PA, UNITED STATES,
September 11, 2026 /
EINPresswire.com/ -- Local business Alderfer Glass is setting the record straight about common misconceptions concerning car windshields. Believing certain myths can lead to costly repairs or dangerous situations for drivers. Understanding the truth about damaged windshields is essential to keeping motorists and their families safe.

Windshield Cracks are Dangerous

One commonly believed myth is that a small chip or crack can be left unaddressed for a long time. When a windshield is chipped from flying debris, many drivers think that it is simply a small blemish that can be taken care of later, particularly if it does not inhibit their view.

However, even small chips can impact the integrity of the glass. Constant vibrations and temperature changes place pressure on the windshield, which can change a minor chip quickly into a large crack.

Another common myth is that cracks cannot be repaired and must be replaced. In truth, minor cracks may be repaired, depending on their location and size, as long as it is addressed quickly. A skilled technician from Alderfer Glass can assess if the crack requires windshield repair in Chalfont, PA.

It is also believed that damage to a windshield only impacts the driver's visibility. But damage to the windshield not only affects the ability to see clearly– it impacts the windshield structure. The windshield can be a vital part of a car's structure, as it is a support element for the roof if the car were to roll over, ensures that airbags are deployed toward passengers, and ensures safety of

the occupants of vehicle in an accident.

Finally, drivers commonly believe that any windshield replacement from any vehicle repair shop looks the same. Yet, in reality, if a windshield replacement is not installed properly or does not meet Auto Glass Safety Council (AGSC) standards, then the windshield replacement may not perform as it should long-term. Visiting the expert team at Alderfer Glass can ensure a high-quality, AGSC-certified windshield replacement in Allentown, PA, prioritizing vehicle performance and driver safety.

Windshields protect drivers from more than flying debris and blocking the wind. Indeed, windshields are an important part of a vehicle's structure and safety. Quickly addressing cracks and chips is the best way to ensure driver safety and optimal vehicle performance.
