

IP8 Expands into Patent Decision Intelligence with Five Connected AI Workflows

IP8 unifies five AI-powered patent workflows to help IP teams make evidence-backed decisions across novelty, FTO, validity, portfolios and monetization.

NEW YORK, NY, UNITED STATES,
September 14, 2026 /

EINPresswire.com/ -- A year after launching agentic AI for patent-infringement surveillance, IP8 expands across critical [patent decision workflows](#) for law firms and enterprise IP teams.

IP8 today announced the launch of its next-generation [Patent Decision Intelligence Platform](#), expanding from its original focus on continuous patent-infringement surveillance and monetization into a unified platform spanning Novelty, Invalidity, Freedom-to-Operate (FTO), Portfolio and Monetization Intelligence.

“

A year later, that same evidence-first approach now powers five of the most important decisions across the patent lifecycle. We designed IP8 to keep expanding one decision workflow at a time.”

*Manish Sinha, Founder & CTO,
PatSeer*

Since its September 2025 launch, IP8 has been built around the precision enterprise users demand. These are teams that have grown wary of AI systems that promise results but end up adding to their workload with noise instead of reducing it. Early adopters have reported 5× more high-quality infringement opportunities compared with manual work, with minimal manual effort required to turn platform output into a decision.

Over the past year, IP8 has extended the same retrieval-first, evidence-backed and agentic approach across the broader patent decision lifecycle, built on the principle that has guided the platform from the beginning: the quality of any analysis depends on the quality of the retrieval that precedes it.

IP8 now brings five connected patent decision workflows into a single platform, with additional workflows planned as the platform expands:

Protect à Novelty Intelligence: Is this invention worth pursuing?

Challenge à Invalidity Intelligence: How vulnerable is this patent, and what art can defeat it?

Clear à FTO Intelligence: What could block our product, and where can we design around it?

Prioritize à Portfolio Intelligence: Which patents are crown jewels, strategic assets, licensing candidates or cost candidates?

Monetize à Monetization Intelligence: Who may be using our patented technology, and where is the evidence?

Every workflow is powered by the same retrieval-first intelligence foundation, combining agentic research, element- and claim-level analysis, and evidence-backed reasoning. The objective is to move beyond document similarity and long result lists to give IP teams decisions they can inspect and defend.

“IP8 started by solving one hard problem well: finding infringement opportunities teams were missing entirely. A year later, that same evidence-first approach now powers five of the most important decisions across the patent lifecycle.

We designed IP8 to keep expanding one decision workflow at a time. What will not change is the standard we apply before anything ships: does this help an IP professional make a decision they can defend, rather than simply giving them another AI answer to react to?” said Manish Sinha, Founder, PatSeer.

IP8 is built by PatSeer, whose leadership and engineering teams bring more than 20 years of experience in patent search and data infrastructure. The PatSeer platform itself was launched in 2013 and is now used by more than 9,000 IP professionals across more than 40 countries. The same underlying [patent database](#) and retrieval expertise power IP8’s retrieval-first approach across its decision workflows.

IP8 is ISO 27001 and SOC 2 Type 2 certified, with AES-256 encryption at rest, TLS 1.3 in transit, and tenant-isolated customer data that is never used to train AI models. US and EU data residency options are on the way.

The platform is also designed to keep experienced IP professionals in the loop wherever legal, technical or commercial judgment matters most. IP8 supports enterprise-grade workflows with configurable levels of expert review and onboarding tailored to each organization’s portfolio, processes and requirements.

IP8 is offering ROI-focused evaluations of the new platform and its workflows starting today. Interested organizations can book a demo at ip8.patseer.com.

About IP8

IP8, a Patent Decision Intelligence Platform, helps IP teams turn inventions, products and patent portfolios into clear, evidence-backed decisions: from novelty and freedom-to-operate to validity, portfolio strategy and monetization. Built by the team behind PatSeer, IP8 combines agentic research, claim-level evidence and enterprise-grade security to help organizations decide what to patent, what to challenge, what to clear, what to keep and what to monetize.
