

Eagle Vision Security Expands into the Port of Oakland to Support Growing Demand for Live Video Monitoring Solutions.

Security technology provider expands NorCal operations with live video monitoring, perimeter intelligence and cargo theft prevention solutions for truck yards.

OAKLAND, CA, UNITED STATES, September 14, 2026 / EINPresswire.com/ -- OAKLAND, California, September 2026 — Eagle Vision Security, the North American leader of intelligent security technology and live video monitoring, today announced the expansion of its operations into the Port of Oakland and the surrounding Northern California logistics market.

The expansion will provide container yard operators, trucking companies, truck yards, warehouses, distribution centers, container facilities and logistics operators serving the Port of Oakland with greater access to Eagle Vision Security's advanced security and threat detection solutions. With significant volumes of freight moving through Oakland and surrounding transportation corridors, security remains an important consideration for businesses responsible for protecting cargo, trailers, trucks, equipment and other high-value assets. Eagle Vision Security's expansion is

Port of Oakland- Live Video Monitoring

Port of Oakland Security

focused on delivering proactive Port of Oakland security solutions designed specifically for commercial and transportation properties.

Rather than relying exclusively on conventional surveillance cameras that record incidents for later review, Eagle Vision Security combines advanced video analytics with live agents to detect, verify and respond to security events as they develop.

"Oakland represents an important market for our continued growth in California because of the concentration of trucking, transportation and logistics operations surrounding the Port," said Parm Deol, President & Chief Visionary Officer of Eagle Vision Security. "These properties require a different approach to security. Our objective is to detect suspicious activity as early as possible, verify what is happening and take action before an intrusion develops into cargo theft or property loss."

Gate Security at Port of Oakland

Addressing Cargo Theft Through Proactive Security

The expansion comes as transportation and logistics operators continue to look for more effective cargo theft prevention strategies.

Container yards, trailer storage facilities and logistics properties across California present unique security challenges because of their large outdoor footprints, extensive fence lines, multiple access points and the constant movement of drivers, trucks, trailers and freight.

Eagle Vision Security approaches these environments through multiple layers of detection and response.

Advanced video analytics can identify suspicious activity around designated areas of a property while live monitoring agents assess verified events in real time. Agents can issue Live-Alert™ audio warnings through onsite speakers, contact authorized personnel and escalate incidents to local law enforcement according to established response procedures.

This approach is designed to move security from passive observation toward active threat intervention.

Intelligent Perimeter Radar for Oakland Truck Yards

As part of the company's expanded [Oakland truck yard security](#) offering, Eagle Vision Security is introducing its Intelligent Perimeter Radar (iPR)™ to facilities throughout the port and Bay Areas.

The technology is designed to strengthen security around fence lines, gates and other exterior areas where unauthorized access may occur.

Intelligent Perimeter Radar can operate alongside advanced video analytics, thermal imaging cameras and PTZ cameras to provide additional detection capabilities across large outdoor environments.

When suspicious activity is detected, the technology helps direct attention toward the affected area so that live agents can assess the event and determine the appropriate response.

For transportation facilities with long fence lines and large outdoor storage areas, this layered approach can help identify potential threats before an individual reaches critical assets, trailers or cargo.

Gate Intelligence for Oakland Logistics Operations

Security at the perimeter is only one part of protecting a modern logistics facility.

Eagle Vision Security is also expanding access to its Gate Intelligence System (GiS)™, designed to provide greater visibility into activity occurring at facility entrances and exits.

The system can help transportation and logistics operators document gate transactions and verify information associated with drivers, trucks, trailers and visitors.

For high-traffic facilities, this creates an additional layer of accountability while helping management teams maintain more consistent records of activity moving through their gates.

Together, these technologies allow security strategies to be designed around the specific operational requirements of container yards, warehouses and logistics facilities rather than applying a conventional one-size-fits-all surveillance model.

Expanding Live Video Monitoring Across Northern California

The Port of Oakland expansion represents another step in Eagle Vision Security's continued growth across California and the United States.

The company specializes in security for transportation facilities with significant outdoor assets, with a particular focus on trucking, transportation, warehousing and logistics environments.

Through live video monitoring, advanced video analytics, intelligent perimeter detection and live intervention, Eagle Vision Security provides customers with security designed around four fundamental objectives: detect, verify, deter and respond.

"Our growth in the United States continues to be driven by transportation and logistics companies looking for security technology that can provide more than recorded video," Deol said. "Our expansion into Oakland gives us the opportunity to bring our technology and experience to one of Northern California's most important transportation and logistics markets."

The company expects the Oakland expansion to support growing demand for intelligent logistics

security, perimeter protection, gate management and live monitoring throughout the Bay Area and Northern California.

About Eagle Vision Security

Eagle Vision Security is a privately held security technology company headquartered in Mississauga, Ontario, providing intelligent security and live video monitoring solutions across Canada and the United States.

The company specializes in protecting truck yards, logistics terminals, warehouses, distribution facilities, construction sites, automotive properties and other commercial facilities with significant outdoor assets.

Eagle Vision Security combines advanced video analytics with trained live agents and technologies including Intelligent Perimeter Radar (iPR)[™], Gate Intelligence System (GiS)[™], Intelligent Visitor Logging (iVL)[™], [Intelligent Damage Reporting \(iDR\)[™]](#), thermal imaging, license plate recognition and intelligent access control.
