

HolaTune Welcomes AI-Generated Music, Including Releases Created With Suno and Udio

HolaTune enables eligible AI-generated music to reach major digital platforms while requiring creators to respect copyright, ownership and DSP policies.

WA, UNITED STATES, September 11, 2026 /EINPresswire.com/ -- [HolaTune](https://www.holatune.com), a global digital music distribution platform, is expanding its support for the rapidly growing community of artists and creators using artificial intelligence as part of the music-making process.

Through HolaTune, eligible AI-generated and AI-assisted music, including tracks created using platforms such as Suno, Udio, and other generative music tools, can be submitted for distribution to major digital music services, subject to applicable rights, platform policies, and content requirements.

“

AI is transforming how music is created, and HolaTune is committed to helping responsible AI creators distribute their music worldwide.”

*Nicolas Moraitis, Digital
Marketing Manager at
HolaTune*

Artificial intelligence is becoming an increasingly important part of modern music creation. Artists, producers, and independent creators are using AI for composition, production, arrangement, sound design, vocal experimentation, and other parts of the creative process.

HolaTune believes that music distribution must evolve alongside these new creative technologies. By working within the requirements of its distribution infrastructure and digital service provider partners, HolaTune is positioning itself at the forefront of AI-friendly music distribution and aims to provide creators with a clear path

to bring eligible AI-generated music to global audiences.

Alongside its support for AI-generated music, HolaTune is building its distribution model around highly competitive pricing and flexible access for independent artists, producers, and record labels.

The HolaTune Free Plan costs \$0 and includes unlimited releases, support for multiple artist and label profiles, distribution to major streaming platforms, and an 80% royalty share.

For creators and labels seeking additional benefits, the Platinum Plan is available for \$49.99 per year and includes 100% royalties, unlimited releases, multiple artist and label profiles, faster release processing, priority support, advanced analytics, and additional distribution features.

Unlike pricing structures that increase substantially as labels add more artists or releases, HolaTune's model is designed to remain accessible as catalogs grow. A label using the Platinum Plan can manage dozens — or potentially hundreds — of artist profiles under the same annual plan, subject to platform policies and account requirements.

This structure is particularly attractive to independent record labels and music companies managing large catalogs, where comparable multi-artist distribution arrangements elsewhere in the market can become significantly more expensive.

Acceptance of AI-generated music does not mean that all AI content is automatically eligible for distribution. Creators remain responsible for ensuring that they have the necessary commercial rights to distribute their recordings and that their releases do not infringe copyrights, trademarks, publicity rights, or other third-party rights.

Content must also comply with the individual policies of digital service providers. HolaTune does not support unauthorized impersonation of well-known artists, deceptive use of another artist's identity or voice, copyright-infringing material, misleading metadata, fraudulent streaming practices, or other content that violates platform requirements.

For music created using services such as Suno or Udio, creators should ensure that the plan, license, or agreement under which the music was generated provides the commercial usage rights required for distribution.

The company's goal is to combine responsible innovation, accessible pricing, and professional distribution infrastructure while maintaining the standards required by streaming platforms and the wider music industry.

HolaTune distributes music to major global digital platforms and provides independent artists and labels with tools to manage releases, royalties, analytics, and music distribution from one platform.

As artificial intelligence continues to reshape creative workflows, HolaTune plans to continue supporting responsible AI-assisted creativity and helping emerging creators bring legitimate music to audiences worldwide.

About HolaTune

HolaTune is a digital music distribution platform helping independent artists, producers, and labels distribute music to major streaming and social platforms worldwide. The company supports both traditionally produced and eligible AI-generated music while maintaining compliance with copyright, ownership, and digital platform requirements.
