DocuGuard AI and Murphi.ai Partner to Advance AI for Home Health and Hospice

Partnership combines deep industry expertise with ambient AI for documentation, revenue assurance, QAPI, patient engagement, patient payments and AI driven RCM.

DocuGuard AI and Murphi.ai combine domain expertise and advanced AI to transform clinical, compliance and revenue workflows for home health and hospice agencies.

DURHAM, NC, UNITED STATES, September 14, 2026 / EINPresswire.com/ -- DocuGuard AI, a domain-led technology and consulting company serving home health and hospice organizations, today announced a strategic partnership with Murphi.ai, an advanced AI platform for healthcare workflow automation.

Through the partnership, DocuGuard AI will expand the AI-powered solutions available to home health and hospice agencies, including ambient AI, patient engagement, clinical and compliance reports, coding and revenue assurance, QAPI support, patient-responsible payment collections and revenue cycle management automation.

> This partnership combines deep home health and hospice expertise with advanced AI to reduce documentation burden, strengthen compliance and help agencies protect earned revenue."
>
> *Brian W. Lebanion, Founder and CEO, DocuGuard AI*

The companies also plan to introduce an AI-powered Referral-to-NOA workflow that will help agencies manage the process from referral receipt and document classification through completeness reviews, eligibility and compliance checks, admission creation, Start of Care scheduling and Notice of Admission submission. The new module is expected to be launched in the coming months.

"Home health and hospice agencies need technology that understands the realities of their clinical, regulatory and reimbursement environments," said Brian Lebanion, Founder and CEO of DocuGuard AI. "This partnership combines Murphi.ai's advanced AI

platform with DocuGuard AI's decades of domain experience. Together, we can help agencies reduce the time clinicians spend charting, improve coding and documentation quality, strengthen QAPI and compliance processes, protect earned revenue and accelerate patient balance collections. Our upcoming Referral-to-NOA solution will further extend that value across one of the most critical workflows in home health."

The partnership is designed to support both clinical and administrative teams. Ambient AI can reduce the time clinicians spend creating visit and assessment documentation, while AI-powered review tools can help identify coding, clinical, compliance and reimbursement gaps before they contribute to delays, denials or lost revenue.

Patient engagement and payment capabilities will allow agencies to communicate with patients and families, send secure payment links and collect patient-responsible balances more efficiently. Planned RCM automation will extend the platform across additional revenue cycle workflows.

"DocuGuard AI is one of the foremost domain-led solution providers dedicated specifically to home health and hospice," said Guru Tadiparti, Founder and CEO of Murphi.ai. "Brian and his team bring exceptional knowledge of coding, compliance, reimbursement and agency operations. Murphi.ai contributes an advanced AI platform that can be embedded into EHRs or delivered directly to agencies. This partnership brings domain expertise and scalable AI together to address the workflows that matter most—from clinical charting and revenue assurance to patient engagement, payments, referrals and RCM."

For home health and hospice organizations, the combined offering will focus on six principal areas:

1. Ambient AI and clinical documentation
2. Coding, compliance, QAPI and revenue assurance
3. Patient engagement and care communication
4. Patient-responsible payment collections
5. Referral-to-NOA workflow automation
6. Revenue cycle management automation

The partnership reflects both companies' shared objective of using AI to support—not replace—healthcare professionals. AI-generated findings and documentation are designed to remain subject to appropriate clinical, coding and compliance review.

ABOUT DOCUGUARD AI

DocuGuard AI provides AI-powered coding, documentation, compliance and revenue assurance solutions purpose-built for home health and hospice agencies. Founded by Brian Lebanion, a home health and hospice compliance expert with more than 30 years of industry experience, the

company combines specialized domain knowledge with intelligent automation to help agencies strengthen documentation, improve audit readiness, reduce denials and protect reimbursement.
