Rhode Island Personal Injury Chiropractor Publishes Clinical Guide for Attorneys on Motor Vehicle Accident Documentation

Dr. Mark J. Mulak Releases The Objective Injury Model — A Framework for Evaluating Objective Documentation in Motor Vehicle Injury Cases

Dr. Mark Mulak, DC - Founder, Cityside Chiropractic

PROVIDENCE, RI, UNITED STATES, September 16, 2026 / EINPresswire.com/ -- Dr. Mark J. Mulak, DC, DACBSP®, DACRB, RMSK®, ICSC, founder of Cityside Chiropractic and a Rhode Island chiropractor with more than twenty years of clinical experience and a specialized focus on motor vehicle accident injury evaluation, has announced the publication of The Objective Injury Model: A Plaintiff Attorney's Guide to Objective Documentation in Motor Vehicle Injury Cases.

Dr. Mulak serves as Rhode Island State Delegate to the American Chiropractic Association, is Expert Witness Qualified through Cleveland University, and participated as a Delphi Panelist on peer-reviewed clinical practice guidelines for neck pain, headache, and back pain. Through Cityside Chiropractic's Providence and Cranston offices, Dr. Mulak provides evaluation, treatment, and objective documentation for patients injured in motor vehicle collisions and personal injury cases throughout Rhode Island.

Bridging the Documentation Gap in Motor Vehicle Injury Cases
Motor vehicle accident cases often rely heavily on subjective complaints when standard imaging — CT or MRI — shows limited findings. When objective findings are absent from the clinical record, defense counsel may challenge the relationship between the collision and the patient's reported symptoms.

The Objective Injury Model provides plaintiff personal injury attorneys with a practical clinical framework for identifying, evaluating, and utilizing measurable objective findings to better support causation analysis, impairment assessment, and functional loss arguments in motor vehicle injury cases.

The book outlines five categories of objective assessment that may identify measurable clinical findings even when standard CT or MRI studies appear unremarkable:

Cityside Chiropractic Logo

- Computerized oculomotor screening for post-concussion documentation
- Force-plate vestibular and balance testing
- Computerized Radiographic Mensuration Analysis (CRMA) for cervical ligamentous instability and spinal biomechanics
- Diagnostic musculoskeletal ultrasound
- Computerized neurocognitive assessment

> When the clinical record contains objective findings, the discussion changes. This book explains what that looks like and why it matters for plaintiff attorneys."
>
> *Dr. Mark J. Mulak, DC, DACBSP®, DACRB, RMSK® — Cityside Chiropractic*

Dr. Mulak explains how these technologies may contribute to objective documentation, causation analysis, impairment assessment, and medical-legal reporting in motor vehicle accident cases.

Serving Rhode Island Personal Injury Patients

Through Cityside Chiropractic's offices in Providence and Cranston, Dr. Mulak provides comprehensive evaluation and treatment for patients injured in motor vehicle collisions and other traumatic events. The practice utilizes advanced objective testing technologies including PostureRay CRMA, RightEye oculomotor screening, BTrackS balance testing, CNS Vital Signs neurocognitive screening, and RMSK-credentialed diagnostic musculoskeletal ultrasound.

About Dr. Mark J. Mulak

Dr. Mark J. Mulak is a chiropractic physician, author, and founder of Cityside Chiropractic. He holds diplomate credentials in sports medicine (DACBSP®) and chiropractic rehabilitation (DACRB), is Registered in Musculoskeletal Sonography (RMSK®), and holds a Graduate Certificate in Healthcare Compliance from Drexel University's Thomas R. Kline School of Law.

About The Objective Injury Model

The Objective Injury Model: A Plaintiff Attorney's Guide to Objective Documentation in Motor Vehicle Injury Cases is published by Cityside Press and is available on Amazon. The book serves as a practical educational resource for plaintiff attorneys, healthcare providers, and others involved in the evaluation and documentation of motor vehicle accident injuries.
