

ANY LAB TEST NOW Expands Access, Offers Advanced Early Cancer Detection Test Nationwide

ANY LAB TEST NOW lowers barriers to lifesaving health screenings, brings the Galleri® Multi-Cancer Early Detection Test to communities across the country

ATLANTA, GA, UNITED STATES,
September 14, 2026 /

EINPresswire.com/ -- [ANY LAB TEST NOW](#)®, the nation's largest direct-access laboratory testing franchise, is now offering the [Galleri](#)® multi-cancer early detection (MCED) test at select locations across the country. The test can be given in a single walk-in appointment that takes less than 15 minutes. From that single test, the Galleri test looks for a signal shared by more than 50 types of cancer, most of which have no recommended screening test today.

“

Lowering barriers to the most advanced screening tools lies at the heart of our mission to be a trusted partner in health and wellness.”

*Clarissa Windham-Bradstock,
CEO of ANY LAB TEST NOW*

"There is a long history of critical screening technology like this arriving years before most people can access it," said Clarissa Windham-Bradstock, CEO of ANY LAB TEST NOW. "The Galleri test has been on the market for five years, mostly reaching people who live near a major medical center or work somewhere with an executive health program. Our locations are locally owned and sit in the middle of communities both big and small. Lowering

barriers to the most advanced screening tools lies at the heart of our mission to be a trusted partner in health and wellness.”

Multi-cancer blood testing has drawn national attention this year. In June, NPR reported that blood tests screening for multiple types of cancer may soon be available to many more people, with much of the discussion centered on how quickly they reach the public.

The Galleri test has been available in the United States since 2021, largely through academic health systems, concierge practices, and corporate executive health programs clustered in major metropolitan areas. ANY LAB TEST NOW locations are local businesses in more than 260

communities, including small cities and towns where those programs do not operate. Galleri is a prescription test, and a licensed physician writes the order before any sample is collected.

What the test does

The Galleri test analyzes cell-free DNA in the blood for patterns associated with cancer. When a signal is present, the report also predicts the part of the body it most likely came from, which gives a customer and their healthcare provider a starting point for follow-up rather than a broad search.

The Galleri test is a screening test, not a diagnostic test. It detects a cancer signal, not cancer itself. A result of "Cancer Signal Detected" requires confirmatory diagnostic testing by a healthcare provider, and a result of "No Cancer Signal Detected" does not rule out cancer. The Galleri test is designed to complement mammograms, colonoscopies, Pap tests, PSA testing and low-dose CT scans, and customers should continue routine screening recommended by their provider regardless of their Galleri test result.

The Galleri test is recommended for adults with an elevated risk for cancer, such as those age 50 and older. It is not recommended for individuals who are pregnant, 21 years old or younger, or undergoing active cancer treatment.

How it works at ANY LAB TEST NOW

Customers can book online or walk in. A trained medical assistant reviews the consent form, collects the sample and ships it immediately to GRAIL's laboratory. Results are typically available about two weeks after the sample reaches the lab and are delivered through the location's secure portal. Every result arrives with instructions to review it with a healthcare provider, and results that detect a cancer signal follow a defined support process that includes GRAIL's patient advocate resources. ANY LAB TEST NOW staff do not interpret results.

"Our owners are already the people their neighbors ask about cancer risk, exposure at work and what their family history means for them," Windham-Bradstock said. "Those conversations happen at our front counters every day. This gives them something substantive to offer when one comes up."

The Galleri test is available now at participating ANY LAB TEST NOW locations and Customers can find their nearest location and learn more at [anylabtestnow.com](https://www.anylabtestnow.com).
