

Propper Document Cloud Platform Achieves Claudeforce Readiness Ahead of Dreamforce

The only AI-native eSignature and document generation platform will showcase its Claudeforce integration to sales and legal teams at Dreamforce in San Francisco

ATLANTA, GA, UNITED STATES, September 14, 2026 / EINPresswire.com/ -- Propper AI, (www.propper.ai) the company redefining intelligent agreement management, today announced that its [Propper Document Cloud Platform](#) is now "Claudeforce" ready, enabling Propper's Gen, FabriK, Sign, Click, and Locker products to operate natively within Claude's expanding enterprise ecosystem. The [Propper AI team](#) will bring the integration to Dreamforce in San Francisco this week, where attendees can see firsthand how agentic document workflows move from the CRM straight into signature.

Using Propper in Salesforce is easy!

"Claudeforce", the expanded strategic partnership between Salesforce and Anthropic announced in August 2026, brings Claude's reasoning together with Salesforce's data, workflows, business logic, and governance to power agentic experiences across the enterprise. The companies have described the collaboration as pairing the leading AI model with the leading AI-powered CRM, and both have signaled plans to keep expanding integrations across Claude, Salesforce, and Slack.

“

The industry pricing model is broken. We created Propper to fix that.”

Grant Peterson, CSO and Former DocuSign CTO

Propper's Claudeforce readiness plugs directly into that vision. Sales and legal teams working

inside Claude can now generate, route, and execute agreements without leaving their agentic workflow, closing the gap between a deal being reasoned over and a deal being signed.

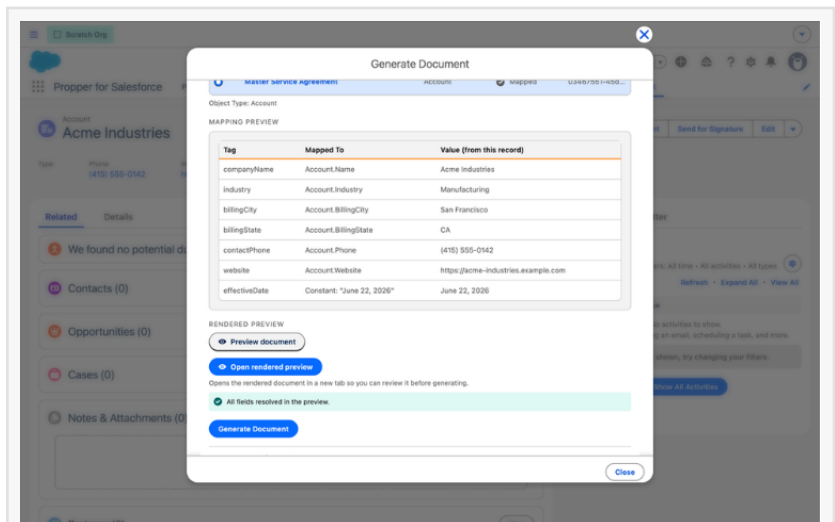

"The eSignature offerings available today are broken, overpriced, and not built to scale with AI," said Jack Berube, CEO of Proper AI. "That's why we built Proper. Being Claudeforce ready means our customers can move from an AI agent's recommendation to a fully executed, compliant agreement in the same breath, no bolted-on integrations, no legacy friction."

Proper AI is the only AI-native eSignature and document generation platform on the market, engineered from the ground up rather than retrofitted with AI features. The platform was built by the technical leadership that pioneered the eSignature industry, giving Proper a rare combination: deep institutional knowledge of what enterprise document workflows require, paired with an architecture designed for the agentic era from day one.

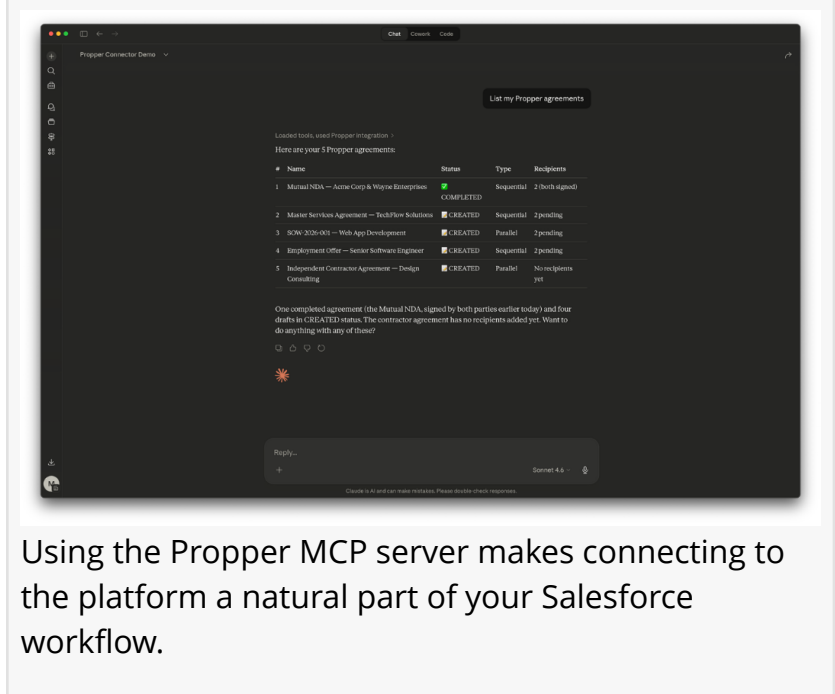

The Proper Document Cloud Platform includes five integrated products: Gen for automated document generation, Fabrik for template building, Sign for e-signature execution, Click for clickwrap agreements, and Locker for secure document storage. The platform holds SOC 2 Type II and HIPAA certifications and integrates with Salesforce, Anthropic, HubSpot, Google Cloud, and CLEAR for biometric identity verification.

"We built Proper because agreements are the last mile of every business transaction, and that last mile has been stuck in 2003 while everything around it modernized," Berube added. "Claudeforce readiness is a signal to the market that document infrastructure has to be AI-native, not AI-adjacent."

Dreamforce attendees can visit the Proper AI team to see live demonstrations of Claudeforce-

Generating Documents in Salesforce with Proper creates new efficiencies.

Using the Proper MCP server makes connecting to the platform a natural part of your Salesforce workflow.

integrated workflows, including agent-initiated document generation, in-line signature routing, and governed agreement execution, all without leaving the Claude experience.

About Propper AI

Propper AI is the maker of the Propper Document Cloud Platform, an [AI-native Intelligent Agreement Cloud](#) headquartered in Alpharetta, Georgia. Propper's five-product suite - Gen, Fabrik, Sign, Click, and Locker, gives enterprises a single platform for generating, managing, signing, and storing agreements. Propper AI was founded by technical leadership who pioneered the eSignature industry and competes with legacy providers including DocuSign, Adobe Sign, and PandaDoc.
