beyondMD Launches Online Patient Education and Clinical Evaluation Platform

Virtual care company founded in 2009 expands its telehealth offering with educational resources and access to licensed U.S. healthcare providers

beyondMD operates a virtual care model with a network of licensed U.S. healthcare providers.

GREENVILLE, MI, UNITED STATES, September 15, 2026 / EINPresswire.com/ -- beyondMD, a virtual healthcare company operating a national network of licensed providers, has launched BMD Peptides, an online platform combining patient educational resources with access to consultations with licensed U.S. healthcare providers.

The company began in 2009 as a network of brick-and-mortar medical clinics before transitioning to a virtual care model. The new platform represents an extension of that model, pairing an educational resource library with a structured intake and clinical review process.

Through the platform, patients can submit information about their health, lifestyle and treatment goals for review. A licensed healthcare provider evaluates the submitted information and determines what, if any, clinical course is appropriate for that individual. Any clinical determination rests with the individual provider, and the platform does not produce automatic outcomes.

The beyondMD clinical network is licensed across all 50 states and includes physicians, a doctor of osteopathic medicine and nurse practitioners. Provider availability and the scope of services offered vary by state and by individual clinical circumstances.

"We wanted to create a platform that puts education and access to qualified healthcare providers together in one place," said Deborah Shurlow, founder of beyondMD. "The goal is to give patients an opportunity to understand the available information and discuss their individual circumstances with a licensed provider before treatment decisions are made."

The platform also maintains an educational library addressing topics in peptide science and clinical practice. The company states that all educational materials are provided for informational purposes only and are not a substitute for medical advice, diagnosis or treatment, and that patients should consult a qualified healthcare professional regarding their own health.

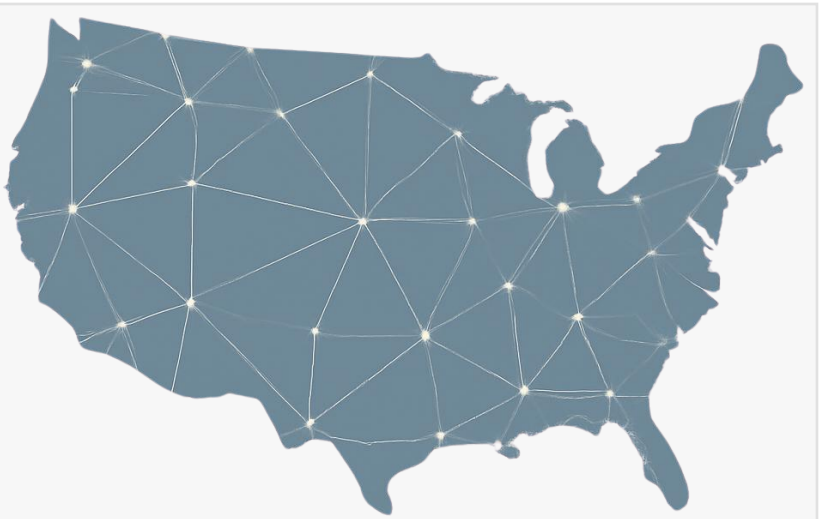

Patients submit information about their health, lifestyle and treatment goals for review by a licensed healthcare provider.

Additional information about the company and its platform is available at bmdpeptides.com.
