

BookFab launches new All-In-One tool for eBooks, manga and audiobooks with AI voice features

BookFab has launched a new All-In-One solution that combines tools for eBooks, manga, digital magazines and audiobooks in a single desktop application.

CHINA, September 15, 2026 /EINPresswire.com/ -- [BookFab](#) has launched a new All-In-One solution that combines tools for eBooks, manga, digital magazines and audiobooks in a single desktop application. The software combines format conversion, library management and AI-powered text-to-speech features, while supporting content from a range of popular reading and audiobook platforms.

Rather than offering separate tools for different types of digital media, BookFab All-In-One combines support for eBooks, manga, magazines and audiobooks in a single desktop application.

According to BookFab, the software supports content from platforms including [Kindle](#), Kobo, BookWalker, Audible, Rakuten Magazine, Readly and audiobook.jp, alongside several services focused on digital manga.

One of the main features of the application is format conversion. BookFab can export supported eBooks to commonly used formats such as EPUB and PDF, making them easier to manage across compatible eReaders, tablets and reading applications.

The software is also designed to handle image-heavy content such as manga and digital magazines. BookFab says these publications can be exported to formats including EPUB, PDF and JPEG while retaining their original images and page layouts.

Audiobook management is another major part of the package. The application supports common audio formats including MP3, M4A, FLAC, WAV and OPUS. Chapter information and metadata can also be retained during supported conversion workflows, according to the company.

BookFab has also integrated AI-based audio creation tools into the software. Its text-to-speech feature can convert text, TXT and EPUB files into spoken audio, effectively allowing written content to be turned into an audiobook. More than 20 voice presets are available, with options

for adjusting characteristics such as speaking style, expression and pauses. A separate AI voice cloning feature allows users to create a synthetic voice from a short voice sample, which can then be used for narration.

For users with larger libraries, BookFab offers batch processing so multiple books or audio files can be handled within the same workflow.

The software can also be used alongside Calibre, the popular open-source eBook management application. This could make the new All-In-One package particularly relevant to users who already rely on Calibre to organize larger digital book collections.

BookFab is positioning the new product as a unified desktop toolkit rather than a single-purpose eBook converter. Its current feature set spans eBooks, manga, magazines and audiobooks, while the company says support for additional platforms and services will continue to expand. BookFab All-In-One is available from the company's official website for Windows and macOS.
