

Earth Finance launches SpatiaFi Energy, the first application of its agentic Spatial Finance platform.

SpatiaFi Energy gives companies a location-by-location view of energy risk and opportunity, so leaders know where to invest to gain competitive advantage.

SEATTLE, WA, UNITED STATES,
September 16, 2026 /

EINPresswire.com/ -- Earth Finance, a global strategy and technology firm, today announced the launch of SpatiaFi Energy, a solution designed to help corporate leaders tackle one of the most complex, costly, and operationally-critical challenges of our time: reliable and affordable energy access.

“The era of guaranteed power is over. Politics, global conflict, AI and data center demand, electrification, and decarbonization goals are fundamentally changing how companies deal with

“

Every major capital decision rests on the unique physical realities of place, yet companies are navigating major economic shifts with disconnected data and black-box models.”

Garrett Kephart

energy,” said Reuven Carlyle, Co-Founder and EVP, Earth Finance, and a former Washington state senator who led adoption of the state’s globally leading climate policies. “Access to reliable and affordable energy is core to financial growth. With SpatiaFi Energy, we’re helping turn ‘location intelligence’ into new insights and better decisions.”

Companies with large physical footprints, complex supply chains, and complex infrastructure needs struggle to connect local energy conditions to financial decision-

making. Critical information is scattered across teams, spreadsheets, vendor proposals, and static reports. As a result, companies lack up-to-date, centralized views of where to act, what to fund, and how to pay for it. SpatiaFi Energy closes that gap. By combining a company’s location and utility data with current, traceable information on local energy conditions, it shows where

supply, price, and carbon intensity create risk or opportunity, quantifies the cost of action and inaction, and compares investment and funding options across the portfolio.

“Every major capital decision rests on the unique physical realities of place, yet companies are navigating major economic shifts with disconnected data and black-box models,” said Garrett Kephart, Co-Founder and CEO, Earth Finance. “Our vision for SpatiaFi is to combine trusted Earth expertise and data, AI, and each client’s portfolio context so leaders can get clear, defensible answers across an entire portfolio and make decisions in real time. We are starting with energy, where the pressure is most urgent, and will extend the same foundation to water and nature.”

Earth Finance will host an executive panel and live demonstration of SpatiaFi Energy during Climate Week NYC on September 22, 2026, at 3:00 PM. For event details and registration, [see here](#).
