

Repair or Replace? The Right Service HVAC on the Florida AC Decision

A South and Central Florida air conditioning contractor outlines the questions that help homeowners compare repair and replacement proposals.

SUNNY ISLES BEACH, FL, UNITED STATES, September 28, 2026 /EINPresswire.com/ -- When a Florida air conditioner fails, the homeowner usually faces one question before any other: repair it, or replace it. The Right Service HVAC, a Florida-licensed air conditioning contractor (licence CAC1821027) serving South Florida and Central Florida, is sharing the questions a homeowner can bring to that conversation so the decision rests on findings rather than on the size of the first estimate.

What failed? A system that stops cooling can involve very different components: a capacitor, a refrigerant leak, a clogged condensate drain, a thermostat or the compressor itself. Each is a different repair at a different cost. A homeowner can ask which component the technician found, how it was determined, and whether the finding was observed or inferred. The Right Service HVAC lists air conditioning repair, refrigerant leak repair, condensate drain service and thermostat work among its published services.

How old is the system, and what has it needed before? The age of the equipment and its repair history are facts the homeowner already holds. Keeping the model number and past invoices at hand lets the conversation compare a proposed repair against what the system has cost over recent seasons, rather than starting from zero.

What would a replacement include? A replacement proposal can be asked to state whether it covers the outdoor unit only, the indoor air handler, or both, and how the new equipment is sized for the home. Those details help a homeowner understand what is being compared across

the proposals. The company publishes AC installation and replacement as a distinct service.

What keeps the decision from returning next summer? [ENERGY STAR maintenance guidance](#) includes checking coils, refrigerant levels and the condensate drain. A homeowner can ask whether a maintenance schedule is offered and what a visit includes. The Right Service HVAC lists AC maintenance among its services.

Which findings would change the recommendation? Asking the contractor to say what would move a repair recommendation to a replacement, or the reverse, makes the reasoning visible and gives the homeowner a written basis for comparing a second opinion.

The company operates in South Florida and Central Florida, with locations listed on Google in Sunny Isles Beach and Lakeland, and its Google Business Profile lists 24-hour availability. Homeowners are asked to confirm their address and the requested service when they call, since availability and scope are confirmed by the company directly.

About The Right Service HVAC

The Right Service HVAC (The Right Service, Inc.) provides air conditioning repair, installation and replacement, and maintenance to homeowners and light-commercial customers in South Florida and Central Florida. The company holds Florida licence CAC1821027 and is licensed and insured. Learn more at rightservicehvac.com or consult [The Right Service HVAC repair information](#). To discuss service at a specific property, call (561) 814-1600.
