Ensera announces partnership with Stevanato Group for commercialization services for Alina® and Aidaptus® platforms

DUBLIN, IRELAND, September 17, 2026 /EINPresswire.com/ -- Ensera, a global CDMO specializing in drug delivery devices and combination product commercialization, today announced a strategic alliance with Stevanato Group, a leading global provider of drug containment, drug delivery, and diagnostic solutions.

Ensera and Stevanato Group alliance

Through the partnership, pharmaceutical companies using Alina®, Stevanato Group's pen injector platform, and Aidaptus®, an autoinjector platform designed by Owen Mumford with engineering and manufacturing support provided by Stevanato Group, can access flexible final assembly, labeling, and secondary packaging services at Ensera's GMP facilities in Europe, the United States, and Asia.

The alliance reflects both companies' commitment in supporting pharmaceutical companies navigating the complex commercialization, localization, supply chain and regulatory requirements associated with launching combination products across global markets.

This latest alliance adds to Ensera's growing network of global device platform partners. These collaborations are particularly valuable for pharmaceutical companies launching specialized therapies that require flexible manufacturing models, regional customization, or low to mid-volume commercial supply.

Bobby O'Connor, Ensera's Chief Commercial Officer said: "We're delighted to partner with Stevanato Group to support pharmaceutical companies bringing combination products to market. By combining proven delivery platforms with flexible final assembly and packaging services, we can help customers simplify commercialization and adapt supply strategies to regional market needs."

Darren Hieber, Sales Lead USA & Alliances added "We're proud that an increasing number of leading drug delivery providers are choosing to work with Ensera. These partnerships are helping create more flexible pathways to commercialization for pharmaceutical companies and expanding the support available throughout the product lifecycle."

Michele Monico, President, Drug Delivery Systems & In Vitro Diagnostics at Stevanato Group, commented: "We are pleased to collaborate with Ensera to further support pharmaceutical companies adopting our proprietary drug delivery platforms. As the industry increasingly looks for more integrated pathways to commercialization, this alliance extends our offering downstream through assembly, labeling, and packaging services, broadening the ecosystem around our devices and providing customers with an additional pathway to simplify product launch and supply chain execution."

About Ensera

Ensera is a global CDMO supporting pharmaceutical and medical device companies with device design, final assembly, labeling, and secondary packaging of injectable formats, including autoinjectors and pre-filled syringes.

Its flexible GMP cleanroom operations across Europe, the US and Asia are optimized for low-to-medium batch volumes, supported by integrated quality systems and cold chain infrastructure. An approved assembly partner for market leading autoinjector platforms, Ensera combines device and pharmaceutical expertise to deliver efficient, compliant supply for combination products.
