Disc Centers of America- Henderson Adds HyperWave Focused Shockwave Therapy to Expand Non-Surgical Care Options

Dr. Swolensky, D.C. introduces focused shockwave technology at its Henderson practice, giving Southern Nevada patients another option for individualized care.

HENDERSON, NV, UNITED STATES, September 17, 2026 /EINPresswire.com/ -- Doctor Swolensky announced that its Henderson practice has added HyperWave focused shockwave therapy, expanding the technology available to patients seeking non-surgical approaches to musculoskeletal care. Led by Dr. Darrell C. Swolensky, D.C., the practice has served the Henderson community for nearly two decades. Dr. Swolensky is the creator of the Swolensky Method of Disc Rejuvenation, a proprietary approach focused on non-surgical spinal care. The addition of HyperWave introduces focused electromagnetic shockwave technology as another tool that may be incorporated into individualized care plans for appropriately evaluated patients.

Bringing Focused Shockwave Technology to Henderson

HyperWave uses focused electromagnetic shockwave technology to deliver acoustic energy to targeted areas of the body. The system is designed to reach treatment depths of up to 120 millimeters and can be incorporated into a patient's care plan based on clinical evaluation and individual needs.

Shockwave therapy has been studied across a range of musculoskeletal applications, including certain tendon and soft-tissue conditions, sports-related injuries, and persistent pain-related concerns. At Doctor Swolensky, the technology may be considered for appropriately evaluated adults experiencing concerns involving joints, tendons, soft tissue, mobility, or range of motion.

The addition comes as healthcare providers continue to incorporate emerging technologies into non-surgical approaches to musculoskeletal care. For patients in Henderson and the greater Las Vegas area, the technology provides another treatment option to discuss with a qualified healthcare professional.

Nearly Two Decades of Care in Southern Nevada

Dr. Swolensky has practiced in Henderson for nearly 20 years and has built his clinical approach around non-surgical solutions for spinal and musculoskeletal concerns. Throughout his career, he has incorporated emerging technologies into his practice and has trained thousands of doctors on the application and implementation of specialized healthcare technologies. His professional background also includes service in the U.S. Air Force, post-graduate study in areas

including functional medicine and spinal biomechanics, and training related to sports and human performance.
His experience with healthcare technology education has also contributed to his focus on helping providers understand how emerging technologies can be incorporated into clinical practice. With the addition of HyperWave, Doctor Swolensky is now able to offer focused shockwave therapy alongside the practice's existing approach to individualized, non-surgical care.

Now Available in Henderson
HyperWave focused shockwave therapy is now available at Doctor Swolensky's Henderson, Nevada, practice. Patients interested in learning whether the technology may be appropriate for their individual circumstances can contact the practice to discuss their concerns and available treatment options.
