Paper Dimensions Launches Website Detailing 50 Years of Specialty Converting

Beaver Dam converter publishes machine-level capability data and a cost tool for buyers weighing in-house slitting

A Webco rewinder converting kraft paper at Paper Dimensions LLC in Beaver Dam, Wisconsin.

BEAVER DAM, WI, UNITED STATES, September 22, 2026 / EINPresswire.com/ -- Paper Dimensions LLC, a specialty paper converting company operating in Beaver Dam, Wisconsin, since 1972, today announced the launch of its redesigned website.

The new site presents the company's core specialty in one place: high-mix, tight-tolerance paper slitting, rewinding, and converting. Paper Dimensions converts rolls in precision widths from 0.5" to 112", accepting incoming parent rolls up to 84" in outside diameter and producing finished rolls up to 72". Slit widths are held to a tolerance of plus or minus 1/32 of an inch, and rewind length to plus or minus 1 percent.

> Most of our customers already own the paper. They need it converted to the width and diameter their line needs. Send us your parent rolls — we'll convert them in Beaver Dam and get them back running."
>
> *Peter Emenecker, President, Paper Dimensions LLC*

Capability detail is now published machine by machine across the company's five rewinder and slitter lines, ranging from an 8" minimum rewind width on the smallest unit to a 114" maximum on the largest. The company serves manufacturers, paper mills, industrial distributors, brokers, and end users that need flexibility and precision for technical, kraft, printing, and food-grade applications.

Beyond capability specifications, the site includes an educational resource for companies weighing whether to slit and rewind in-house or partner with a specialty converter. A calculator titled 'What Is Your Slitter Really Costing You?' examines costs that internal converting programs often overlook, including capital, floor space, scrap and trim loss, supervision, and downtime risk, and offers a framework for calculating a fully loaded cost per roll.

“We've spent more than 50 years doing one thing and doing it well,” said Peter Emenecker, president of Paper Dimensions LLC. “We're not the biggest converter in the region, and we don't try to be. We aim to be the most disciplined and the most trusted — our customers call when precision matters and mistakes aren't an option. This new site finally tells that story the way it deserves to be told.”

The website was designed and built by Carson Emenecker during a summer internship with the company. He has since returned to the University of Wisconsin-Madison to pursue a degree in computer science.

Paper Dimensions serves customers primarily across Wisconsin, Michigan, Minnesota, and Illinois, along with select national partners whose needs align with the company's specialty capabilities.

Full machine-level specifications and a downloadable capabilities sheet are available on the company's converting capabilities page, along with the in-house slitting cost calculator.

About Paper Dimensions LLC

Founded in 1972 and based in Beaver Dam, Wisconsin, Paper Dimensions LLC provides specialty paper slitting, rewinding, and converting for high-mix, specification-sensitive applications. The company operates five rewinder and slitter lines, converting large paper rolls to custom widths and diameters for manufacturers, paper mills, industrial distributors, and niche markets.
